

CaBP8 Antibody
Catalog # ASC11174**Specification**

CaBP8 Antibody - Product Information

Application	WB
Primary Accession	Q9BXU9
Other Accession	NP_113656 , 157743275
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	CaBP8 antibody can be used for detection of CaBP8 by Western blot at 1 - 2 µg/mL. For immunofluorescence start at 20 µg/mL.

CaBP8 Antibody - Additional Information

Gene ID	83698
Target/Specificity	
CALN1;	

Reconstitution & Storage

CaBP8 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

CaBP8 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

CaBP8 Antibody - Protein Information

Name CALN1

Synonyms CABP8

Function

Negatively regulates Golgi-to-plasma membrane trafficking by interacting with PI4KB and inhibiting its activity. May play a role in the physiology of neurons and is potentially important in memory and learning.

Cellular Location

Golgi apparatus, trans-Golgi network membrane; Single-pass type IV membrane protein. Cytoplasm, perinuclear region. Cell membrane; Single-pass type IV membrane protein

Tissue Location

Brain specific..

CaBP8 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

CaBP8 Antibody - Images

Western blot analysis of CaBP8 in 3T3 cell lysate with CaBP8 antibody at (A) 1 and (B) 2 μ g/mL.

CaBP8 Antibody - Background

CaBP8 Antibody: Calcium binding proteins (CaBP) play a crucial role in the calcium-mediated cellular signal transduction pathway in the central nervous system. The CaBP family shares much similarity with CaM I (calmodulin), and it has been shown that CaBP proteins can substitute functionally for, and possibly augment the function of, CaM I. CaBP8, contains two EF-hand domains for calcium binding and shares 70% homology with CaBP7 and 50% homology with CaM I. It negatively regulates Golgi-to-plasma membrane trafficking by interacting with PI4KB and inhibiting its activity. Both CaBP8 and CaBP7 possess a targeting mechanism that is unique amongst the CaBPs that may contribute to differential functional Ca^{2+} -sensing by these family members.
