

PRR5 Antibody
Catalog # ASC11316**Specification**

PRR5 Antibody - Product Information

Application	WB, IHC, IF
Primary Accession	P85299
Other Accession	NP_851850 , 31317218
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Application Notes	PRR5 antibody can be used for detection of PRR5 by Western blot at 1 µg/mL. Antibody can also be used for immunohistochemistry starting at 5 µg/mL. For immunofluorescence start at 20 µg/mL.

PRR5 Antibody - Additional InformationGene ID **55615****Target/Specificity**

PRR5; PRR5 antibody is predicted to not cross-react with other Protor protein family members.

Reconstitution & Storage

PRR5 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

PRR5 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

PRR5 Antibody - Protein Information**Name** PRR5**Synonyms** PROTOR1**Function**

Subunit of mTORC2, which regulates cell growth and survival in response to hormonal signals. mTORC2 is activated by growth factors, but, in contrast to mTORC1, seems to be nutrient-insensitive. mTORC2 seems to function upstream of Rho GTPases to regulate the actin cytoskeleton, probably by activating one or more Rho-type guanine nucleotide exchange factors. mTORC2 promotes the serum-induced formation of stress-fibers or F-actin. mTORC2 plays a critical role in AKT1 'Ser-473' phosphorylation, which may facilitate the phosphorylation of the activation loop of AKT1 on 'Thr-308' by PDK1 which is a prerequisite for full activation. mTORC2 regulates the phosphorylation of SGK1 at 'Ser-422'. mTORC2 also modulates the phosphorylation of PRKCA on 'Ser-657'. PRR5 plays an important role in regulation of PDGFRB expression and in modulation of

platelet-derived growth factor signaling. May act as a tumor suppressor in breast cancer.

Tissue Location

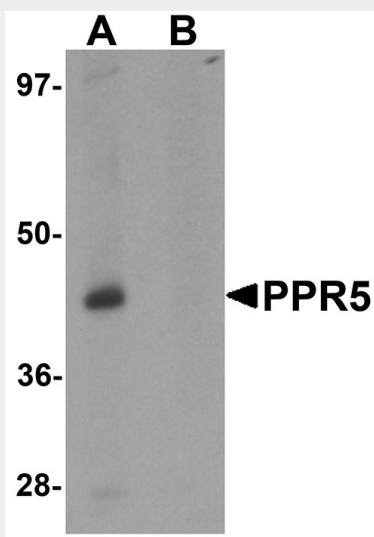

Most abundant in kidney and liver. Also highly expressed in brain, spleen, testis and placenta. Overexpressed in several colorectal tumors.

PPR5 Antibody - Protocols

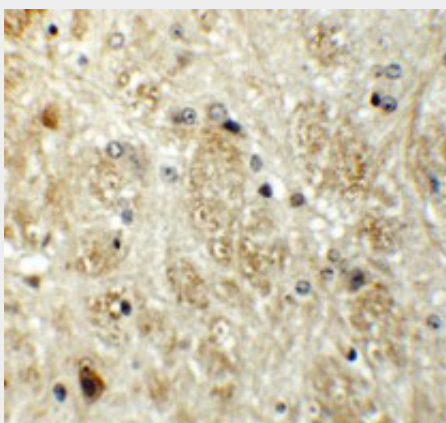

Provided below are standard protocols that you may find useful for product applications.

PPR5 Antibody - Images

Western blot analysis of PPR5 in SK-N-SH cell lysate with PPR5 antibody at 1 μ g/mL in (A) the absence and (B) the presence of blocking peptide

Immunohistochemistry of PPR5 in mouse brain tissue with PPR5 antibody at 5 µg/mL.

Immunofluorescence of PPR5 in mouse brain tissue with PPR5 antibody at 20 µg/mL.

PPR5 Antibody - Background

PPR5 Antibody: Proline-rich protein 5 (PPR5), also known as Protor-1, is a 388 amino acid protein in Protor family, is thought to act as a tumor suppressor in breast and colorectal tumorigenesis. PPR5 is widely expressed and possesses two RICTOR interaction sites and a C-terminal Proline rich region. It promotes Rapamycin complex 2 (mTORC2) activity. There are four isoforms of PPR5 that are produced as a result of alternative splicing events and these isoforms play an important role in the modulation of platelet-derived growth factor signaling and in the regulation of PDGFR-beta expression.
