SIVA Antibody
Catalog # ASC11414

Specification

SIVA Antibody - Product Information

Application	**WB, IF**
Primary Accession	O15304
Other Accession	NP_068355, 11277468
Reactivity	**Human, Mouse**
Host	**Chicken**
Clonality	**Polyclonal**
Isotype	**IgY**
Application Notes	**SIVA antibody can be used for detection of EPAC1 by Western blot at 1 µg/mL. Antibody can also be used for immunofluorescence starting at 20 µg/mL. For immunofluorescence start at 20 µg/mL.**

SIVA Antibody - Additional Information

Gene ID	**10572**

Target/Specificity
SIVA1;

Reconstitution & Storage
SIVA antibody can be stored at 4℃ for three months and -20℃, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions
SIVA Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

SIVA Antibody - Protein Information

Name SIVA1

Synonyms SIVA

Function
Induces CD27-mediated apoptosis. Inhibits BCL2L1 isoform Bcl- x(L) anti-apoptotic activity. Inhibits activation of NF-kappa-B and promotes T-cell receptor-mediated apoptosis.

Cellular Location
Cytoplasm. Nucleus. Note=In the nucleus, accumulates in dot- like structures

Tissue Location
Ubiquitous. Mostly expressed in thymus, testis, ovary, prostate, small intestine and spleen and less in colon

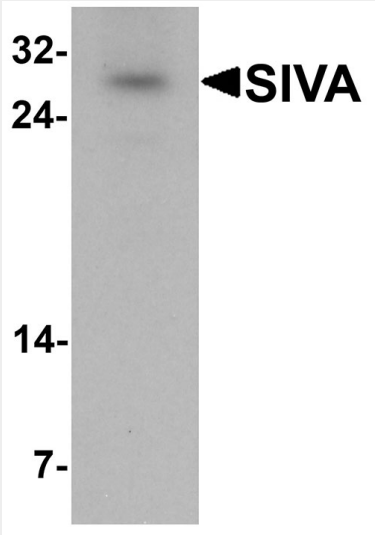
SIVA Antibody - Protocols

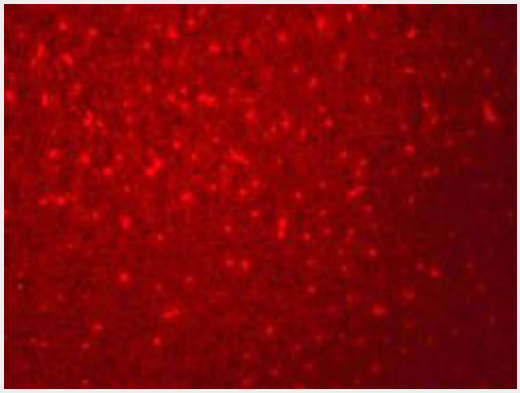
Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

SIVA Antibody - Images



Western blot analysis of SIVA in mouse liver tissue lysate with SIVA antibody at 1 µg/mL.



Immunofluorescence of SIVA in mouse liver cells with SIVA antibody at 20 µg/mL.

SIVA Antibody - Background

SIVA Antibody: SIVA plays an important role in the apoptotic pathway induced by the CD27 antigen, a member of the tumor necrosis factor receptor (TFNR) superfamily. SIVA is a small cysteine-rich protein with a unique N-terminal amphipathic helical region, a death domain homology region (DDHR) and a C-terminal cysteine-rich B-box-like or zinc-finger-like structure. The

DDHR domain binds to CD27 and induces apoptosis in T cells through a caspase-dependent mitochondrial pathway. SIVA inhibits BCL2L1 isoform Bcl-xL anti-apoptotic activity and inhibits activation of NFκ-B and promotes T-cell receptor-mediated apoptosis. SIVA represents a potential therapeutic target for the treatment of neuronal cell death diseases.
