Clonality
Isotype

Application Notes

WB, IHC, IF 015522

NP_055175, 31377777 Human, Mouse, Rat

Rabbit Polyclonal

IgG

NKX2-8 antibody can be used for detection

of NKX2-8 by Western blot at 1 μg/mL.

Antibody can also be used for

immunohistochemistry starting at 2.5 µg/mL. For immunofluorescence start at

 $2.5 \mu g/mL$.

NKX2-8 Antibody - Additional Information

Gene ID 26257

Target/Specificity

NKX2-8; NKX2-8 antibody is predicted to not cross-react with other NK2 homeobox family members.

Reconstitution & Storage

NKX2-8 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

Precautions

NKX2-8 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

NKX2-8 Antibody - Protein Information

Name NKX2-8

Synonyms NKX-2.8, NKX2G, NKX2H

Cellular Location

Nucleus.

NKX2-8 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

NKX2-8 Antibody - Images

Western blot analysis of NKX2-8 in rat liver tissue lysate with NKX2-8 antibody at 1 μ g/mL in (A) the absence and (B) the presence of blocking peptide

Immunohistochemistry of NKX2-8 in human liver tissue with NKX2-8 antibody at 2.5 μg/mL.

Immunofluorescence of NKX-8 in human liver tissue with NKX2-8 antibody at 20 μ g/mL.

NKX2-8 Antibody - Background

NKX2-8 Antibody: NKX2-8 (NK2 homeobox 8) is a member of a family of transcription factors that are involved in embryonic development and cell fate. It is expressed in the ventral foregut, the developing heart, the epithelial layers of the branchial arches and in the dorsal mesoderm. In conjunction with related protein, NKX2-5, NKX2-8 may play a role in cardiac embryonic development. NKX2-8 is also thought to be involved in lung development and is suspected of being an oncogene in lung cancer that is activated by way of gene amplification at chromosome 14q13.
