Human, Mouse, Rat
Rabbit
Polyclonal
IgG
Predicted: 39 kDa

Application Notes

Observed: 465 kDa KDa
WNT5 antibody can be used for detection of WNT5 by Western blot at 1 - 2 µg/ml. For immunofluorescence start at 20 µg/mL.

WNT5 Antibody - Additional Information

Gene ID **81029**

Target/Specificity

WNT5; WNT5 antibody is human, mouse and rat reactive. WNT5 antibody will detect both WNT5A and WNT5B. At least two isoforms of WNT5B are known to exist; this antibody will detect both isoforms.

Reconstitution & Storage

WNT5 antibody can be stored at 4°C for three months and -20°C, stable for up to one year.

Precautions

WNT5 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

WNT5 Antibody - Protein Information

Name WNT5B

Function

Ligand for members of the frizzled family of seven transmembrane receptors. Probable developmental protein. May be a signaling molecule which affects the development of discrete regions of tissues. Is likely to signal over only few cell diameters (By similarity).

Cellular Location

Secreted, extracellular space, extracellular matrix

WNT5 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

WNT5 Antibody - Images

Western blot analysis of WNT5 in Jurkat cell lysate with WNT5 antibody at 1 μ g/ml in (A) the absence and (B) the presence of blocking peptide.

Immunohistochemistry of WNT5 in rat colon tissue with WNT5 antibody at 5 μ g/mL.

WNT5 Antibody - Background

WNT5A and WNT5B are near-identical members of the WNT gene family, which consists of structurally related genes which encode secreted signaling proteins that have been implicated in oncogenesis and in several developmental processes, including regulation of cell fate and patterning during embryogenesis (1,2). WNT5A and WNT5B coordinate chondrocyte proliferation and differentiation by differentially regulating cyclin D1 and p130 expression, as well as chondrocyte-specific Col2a1 expression (3). Up-regulation of WNT5A and WNT5B has been observed

in several types of human cancers, suggesting that they may be useful as diagnostic markers or potent therapeutic targets (4).
