Mouse IgG2a isotype control Fluorescein

Monoclonal M2A IgG2a , Fluorescein (FITC)
Catalog # ASR1110

Specification

Mouse IgG2a isotype control Fluorescein - Product Information

Description	**MOUSE IgG2a isotype control Fluorescein conjugated**
Conjugate	**Fluorescein (FITC)**
FP Value	**2.1 moles Fluorescein (FITC) per mole of Mouse IgG2a**
Clonality	**Monoclonal**
Application	**,4,**
Application Note	**FlowCytometry 1:1000-1:5000**
Physical State	**Lyophilized**
Host Isotype	**IgG2a**
Buffer	**0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2**
Species of Origin	**Mouse**
Reconstitution Volume	**100 µL**
Reconstitution Buffer	**Restore with deionized water (or equivalent)**
Stabilizer	**10 mg/mL Bovine Serum Albumin (BSA) - Immunoglobulin and Protease free**
Preservative	**0.01% (w/v) Sodium Azide**

Mouse IgG2a isotype control Fluorescein - Additional Information

Shipping Condition
Ambient

Purity
This product has been prepared from normal mouse serum by immunoaffinity chromatography using antibodies coupled to agarose beads. Extensive cross-adsorbtion was performed to remove any unwanted subclasses. Typically less than 1% cross reactivity against other mouse heavy or light chains isotypes was detected by ELISA.

Storage Condition
Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

Precautions Note
This product is for research use only and is not intended for therapeutic or diagnostic applications.

Mouse IgG2a isotype control Fluorescein - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Mouse IgG2a isotype control Fluorescein - Background

Isotype controls are important for Flow Cytometry and have no specificity for target cells within a particular experiment. Their purpose is to confirm the specificity of primary antibody binding that it is not a result of non-specific Fc receptor binding to cells or other cellular protein interactions. Isotype controls need to be matched to the specific primary Abs (species and isotype, including heavy and light chains) being used.
