

Rabbit IgG (Biotin Conjugated)
Catalog # ASR1113**Specification**

Rabbit IgG (Biotin Conjugated) - Product Information

Description	RABBIT IgG whole molecule Biotin conjugated
Conjugate	Biotin
Physical State	Lyophilized
Host Isotype	IgG
Buffer	0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2
Species of Origin	Rabbit
Reconstitution Volume	1.0 mL
Reconstitution Buffer	Restore with deionized water (or equivalent)
Stabilizer	10 mg/mL Bovine Serum Albumin (BSA) - Immunoglobulin and Protease free
Preservative	0.01% (w/v) Sodium Azide

Rabbit IgG (Biotin Conjugated) - Additional Information**Shipping Condition**

Ambient

Purity

Rabbit IgG whole molecule Biotin conjugated was prepared from normal serum delipidation, salt fractionation, ion exchange chromatography followed by extensive dialysis against the buffer stated above. Rabbit IgG whole molecule Biotin conjugated assayed by immunoelectrophoresis resulted in a single precipitin arc against anti-biotin, anti-Rabbit IgG and anti-Rabbit Serum.

Storage Condition

Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. Rabbit IgG whole molecule Biotin conjugated is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

Precautions Note

This product is for research use only and is not intended for therapeutic or diagnostic applications.

Rabbit IgG (Biotin Conjugated) - Protein Information**Rabbit IgG (Biotin Conjugated) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

Rabbit IgG (Biotin Conjugated) - Images

SDS-PAGE of Rabbit IgG Whole Molecule Biotin Conjugated . Lane M: 3 µL Opal Prestained Marker . Lane 1: Reduced Rabbit IgG Whole Molecule Biotin Conjugated . Lane 2: Reduced Rabbit IgG F(ab) Fragment . Lane 3: Reduced Rabbit IgG F(c) Fragment . Lane 4: Reduced Rabbit IgM Whole Molecule . Load: 1 µg for F(ab) and F(c); 1.2 µg for IgG and IgM. Predicted/Observed size: IgG at 50 and 25 kDa; F(c) at 25 kDa; F(ab) at 25 kDa; IgM at 70 and 23 kDa. Observed F(c) Fragment migrates slightly higher.

Rabbit IgG (Biotin Conjugated) - Background

Secreted as part of the adaptive immune response by plasma B cells, immunoglobulin G constitutes 75% of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as well as fungi and facilitates their destruction or neutralization via agglutination (and thereby immobilizing them), activation of the complement cascade, and opsonization for phagocytosis. The whole IgG molecule possesses both the F(c) region, recognized by high-affinity Fc receptor proteins, as well as the F(ab) region possessing the epitope-recognition site. Both heavy and light chains of the antibody molecule are present. This Human IgG whole molecule is conjugated to biotin (Vitamin H), a small biomolecule that has a large affinity for avidin and streptavidin. Rabbit IgG whole molecule Biotin Conjugated is ideal for investigators in Immunology, Cancer, and Microbiology research.
