

RAT IgG2c isotype control Biotin

Monoclonal IgG2c , Biotin Catalog # ASR1134

Specification

RAT IgG2c isotype control Biotin - Product Information

Description

Conjugate FP Value Clonality Application Application Note

Physical State Host Isotype Species of Origin Stabilizer Preservative RAT IgG2c isotype control Biotin conjugated Biotin 2-8 moles Biotin per mole of Rat IgG2c Monoclonal ,4,10, ELISA 1:2000-1:20,000;FlowCytometry 1:1000-1:5000 Liquid (sterile filtered) IgG2c Rat None 0.01% (w/v) Sodium Azide

RAT IgG2c isotype control Biotin - Additional Information

Shipping Condition Wet Ice

Purity

RAT IgG2c isotype control has been prepared from concentrated cell culture supernatant by immunoaffinity chromatography using protein G. In an Ouchterlony double diffusion assay the material is non-reactive with antisera to rat IgG1, IgG2a, IgG2b, IgG3, IgM, and IgA. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Rat IgG and anti-Rat serum. Light and heavy chain composition has been confirmed.

Storage Condition

Store vial at 4° C prior to opening. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use. DO NOT FREEZE. This product is light sensitive.

Precautions Note

This product is for research use only and is not intended for therapeutic or diagnostic applications.

RAT IgG2c isotype control Biotin - Protein Information

RAT IgG2c isotype control Biotin - Protocols

Provided below are standard protocols that you may find useful for product applications.

<u>Western Blot</u>

- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

RAT IgG2c isotype control Biotin - Background

RAT IgG2c isotype control is used in flow cytometry, western blot and ELISA and differentiate between immunoglobulin classes and subclasses. Isotype controls allow for the genetic variations or differences in the constant regions of the heavy and light chains. In Rat there are six relevant heavy chain isotypes and two light chain isotypes: heavy chain a - IgA, ? - IgG 1, 2a, 2b, 2c and μ - IgM, light chain ? and ?.
