

B3GALT2 Antibody (monoclonal) (M02)

Mouse monoclonal antibody raised against a partial recombinant B3GALT2.

Catalog # AT1252a

Specification

B3GALT2 Antibody (monoclonal) (M02) - Product Information

Application	E
Primary Accession	O43825
Other Accession	NM_003783
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2a Kappa
Calculated MW	49213

B3GALT2 Antibody (monoclonal) (M02) - Additional Information

Gene ID 8707

Other Names

Beta-1, 3-galactosyltransferase 2, Beta-1, 3-GalTase 2, Beta3Gal-T2, Beta3GalT2, 241-, UDP-galactose:2-acetamido-2-deoxy-D-glucose 3beta-galactosyltransferase 2, B3GALT2

Target/Specificity

B3GALT2 (NP_003774, 324 a.a. ~ 422 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

B3GALT2 Antibody (monoclonal) (M02) is for research use only and not for use in diagnostic or therapeutic procedures.

B3GALT2 Antibody (monoclonal) (M02) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)

- [Flow Cytometry](#)
- [Cell Culture](#)

B3GALT2 Antibody (monoclonal) (M02) - Images

Detection limit for recombinant GST tagged B3GALT2 is approximately 3ng/ml as a capture antibody.

B3GALT2 Antibody (monoclonal) (M02) - Background

This gene is a member of the beta-1,3-galactosyltransferase (beta3GalT) gene family. This family encodes type II membrane-bound glycoproteins with diverse enzymatic functions using different donor substrates (UDP-galactose and UDP-N-acetylglucosamine) and different acceptor sugars (N-acetylglucosamine, galactose, N-acetylgalactosamine). The beta3GalT genes are distantly related to the *Drosophila* Brainiac gene and have the protein coding sequence contained in a single exon. The beta3GalT proteins also contain conserved sequences not found in the beta4GalT or alpha3GalT proteins. The carbohydrate chains synthesized by these enzymes are designated as type 1, whereas beta4GalT enzymes synthesize type 2 carbohydrate chains. The ratio of type 1:type 2 chains changes during embryogenesis. By sequence similarity, the beta3GalT genes fall into at least two groups: beta3GalT4 and 4 other beta3GalT genes (beta3GalT1-3, beta3GalT5). This gene encodes a protein that functions in N-linked glycoprotein glycosylation and shows strict donor substrate specificity for UDP-galactose.
