BOLL Antibody (monoclonal) (M03)

Mouse monoclonal antibody raised against a partial recombinant BOLL.
Catalog # AT1308a

Specification

BOLL Antibody (monoclonal) (M03) - Product Information

Application	**WB, IHC, E**
Primary Accession	Q8N9W6
Other Accession	NM_033030
Reactivity	**Human**
Host	**mouse**
Clonality	**Monoclonal**
Isotype	**IgG2a Kappa**
Calculated MW	**31301**

BOLL Antibody (monoclonal) (M03) - Additional Information

Gene ID 66037

Other Names
Protein boule-like, BOLL, BOULE

Target/Specificity
BOLL (NP_149019, 185 a.a. ~ 283 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution
WB~~1:500~1000

Format
Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage
Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions
BOLL Antibody (monoclonal) (M03) is for research use only and not for use in diagnostic or therapeutic procedures.

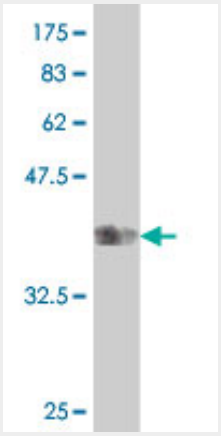

BOLL Antibody (monoclonal) (M03) - Protocols

Provided below are standard protocols that you may find useful for product applications.

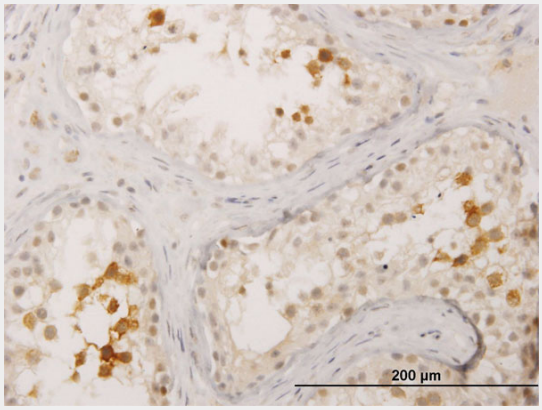

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry

- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

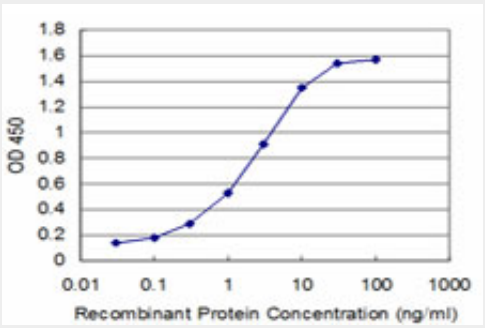

BOLL Antibody (monoclonal) (M03) - Images

Antibody Reactive Against Recombinant Protein.Western Blot detection against Immunogen (36.63 KDa) .

Immunoperoxidase of monoclonal antibody to BOLL on formalin-fixed paraffin-embedded human testis. [antibody concentration 3 ug/ml]

Detection limit for recombinant GST tagged BOLL is approximately 0.3ng/ml as a capture antibody.

BOLL Antibody (monoclonal) (M03) - Background

This gene belongs to the DAZ gene family required for germ cell development. It encodes an

RNA-binding protein which is more similar to Drosophila Boule than to human proteins encoded by genes DAZ (deleted in azoospermia) or DAZL (deleted in azoospermia-like). Loss of this gene function results in the absence of sperm in semen (azoospermia). Histological studies demonstrated that the primary defect is at the meiotic G2/M transition. Two alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.
