ERCC1 Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a partial recombinant ERCC1.
Catalog # AT1936a

Specification

ERCC1 Antibody (monoclonal) (M01) - Product Information

Application	**IF, WB, E**
Primary Accession	P07992
Other Accession	BC052813
Reactivity	**Human**
Host	**mouse**
Clonality	**Monoclonal**
Isotype	**IgG2a Kappa**
Calculated MW	**32562**

ERCC1 Antibody (monoclonal) (M01) - Additional Information

Gene ID 2067

Other Names
DNA excision repair protein ERCC-1, ERCC1

Target/Specificity
ERCC1 (AAH52813, 207 a.a. ~ 281 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution
WB~~1:500~1000

Format
Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage
Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions
ERCC1 Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

ERCC1 Antibody (monoclonal) (M01) - Protocols

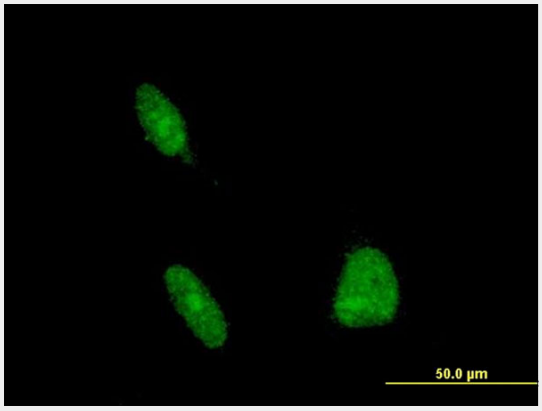
Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry

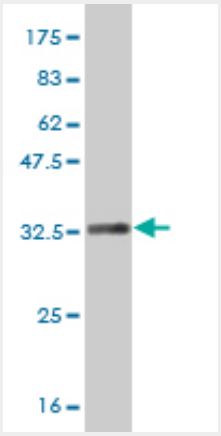
10320 Camino Santa Fe, Suite G
San Diego, CA 92121
Tel: 858.875.1900 Fax: 858.875.1999

- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

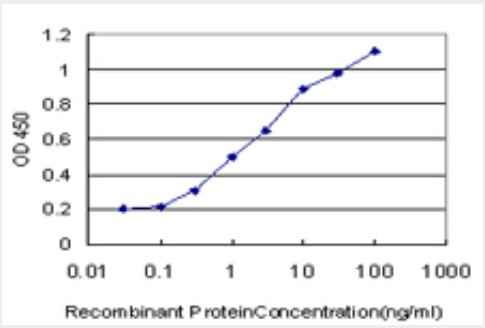
ERCC1 Antibody (monoclonal) (M01) - Images



Immunofluorescence of monoclonal antibody to ERCC1 on HeLa cell . [antibody concentration 10 ug/ml]



Antibody Reactive Against Recombinant Protein.Western Blot detection against Immunogen (33.99 KDa) .



Detection limit for recombinant GST tagged ERCC1 is approximately 0.03ng/ml as a capture antibody.

ERCC1 Antibody (monoclonal) (M01) - Background

The product of this gene functions in the nucleotide excision repair pathway, and is required for the

repair of DNA lesions such as those induced by UV light or formed by electrophilic compounds including cisplatin. The encoded protein forms a heterodimer with the XPF endonuclease (also known as ERCC4), and the heterodimeric endonuclease catalyzes the 5' incision in the process of excising the DNA lesion. The heterodimeric endonuclease is also involved in recombinational DNA repair and in the repair of inter-strand crosslinks. Mutations in this gene result in cerebrooculofacioskeletal syndrome, and polymorphisms that alter expression of this gene may play a role in carcinogenesis. Multiple transcript variants encoding different isoforms have been found for this gene. The last exon of this gene overlaps with the CD3e molecule, epsilon associated protein gene on the opposite strand.
