

GNB3 Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a full length recombinant GNB3.

Catalog # AT2228a

Specification

GNB3 Antibody (monoclonal) (M01) - Product Information

Application	IF, WB
Primary Accession	P16520
Other Accession	BC002454
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2a Kappa
Calculated MW	37221

GNB3 Antibody (monoclonal) (M01) - Additional Information

Gene ID 2784

Other Names

Guanine nucleotide-binding protein G(I)/G(S)/G(T) subunit beta-3, Transducin beta chain 3, GNB3

Target/Specificity

GNB3 (AAH02454, 1 a.a. ~ 340 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

GNB3 Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

GNB3 Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)

- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

GNB3 Antibody (monoclonal) (M01) - Images

Immunofluorescence of monoclonal antibody to GNB3 on HepG2 cell. [antibody concentration 10 ug/ml]

GNB3 monoclonal antibody (M01), clone M1-1-1D5 Western Blot analysis of GNB3 expression in HepG2 (Cat # L019V1).

GNB3 Antibody (monoclonal) (M01) - Background

Heterotrimeric guanine nucleotide-binding proteins (G proteins), which integrate signals between receptors and effector proteins, are composed of an alpha, a beta, and a gamma subunit. These subunits are encoded by families of related genes. This gene encodes a beta subunit. Beta subunits are important regulators of alpha subunits, as well as of certain signal transduction receptors and effectors. A single-nucleotide polymorphism (C825T) in this gene is associated with essential hypertension and obesity. This polymorphism is also associated with the occurrence of the splice variant GNB3-s, which appears to have increased activity. GNB3-s is an example of alternative splicing caused by a nucleotide change outside of the splice donor and acceptor sites. Additional splice variants may exist for this gene, but they have not been fully described.
