

LGMN Antibody (monoclonal) (M02)**Mouse monoclonal antibody raised against a partial recombinant LGMN.****Catalog # AT2703a****Specification**

LGMN Antibody (monoclonal) (M02) - Product Information

Application	E
Primary Accession	O99538
Other Accession	BC003061
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG1 kappa
Calculated MW	49411

LGMN Antibody (monoclonal) (M02) - Additional Information**Gene ID** 5641**Other Names**

Legumain, Asparaginyl endopeptidase, Protease, cysteine 1, LGMN, PRSC1

Target/Specificity

LGMN (AAH03061.1, 1 a.a. ~ 433 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

LGMN Antibody (monoclonal) (M02) is for research use only and not for use in diagnostic or therapeutic procedures.

LGMN Antibody (monoclonal) (M02) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

- [Cell Culture](#)

LGMN Antibody (monoclonal) (M02) - Images

Detection limit for recombinant GST tagged LGMN is approximately 0.1ng/ml as a capture antibody.

LGMN Antibody (monoclonal) (M02) - Background

This gene encodes a cysteine protease that has a strict specificity for hydrolysis of asparaginyl bonds. This enzyme may be involved in the processing of bacterial peptides and endogenous proteins for MHC class II presentation in the lysosomal/endosomal systems. Enzyme activation is triggered by acidic pH and appears to be autocatalytic. Protein expression occurs after monocytes differentiate into dendritic cells. A fully mature, active enzyme is produced following lipopolysaccharide expression in mature dendritic cells. Overexpression of this gene may be associated with the majority of solid tumor types. This gene has a pseudogene on chromosome 13. Several alternatively spliced transcript variants have been described, but the biological validity of only two has been determined. These two variants encode the same isoform.
