

**PPARBP Antibody (monoclonal) (M05)****Mouse monoclonal antibody raised against a partial recombinant PPARBP.****Catalog # AT3392a****Specification**

---

**PPARBP Antibody (monoclonal) (M05) - Product Information**

Application	WB, E
Primary Accession	<a href="#">Q15648</a>
Other Accession	<a href="#">NM_004774</a>
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG1 Kappa
Calculated MW	168478

**PPARBP Antibody (monoclonal) (M05) - Additional Information****Gene ID** 5469**Other Names**

Mediator of RNA polymerase II transcription subunit 1, Activator-recruited cofactor 205 kDa component, ARC205, Mediator complex subunit 1, Peroxisome proliferator-activated receptor-binding protein, PBP, PPAR-binding protein, Thyroid hormone receptor-associated protein complex 220 kDa component, Trap220, Thyroid receptor-interacting protein 2, TR-interacting protein 2, TRIP-2, Vitamin D receptor-interacting protein complex component DRIP205, p53 regulatory protein RB18A, MED1

**Target/Specificity**

PPARBP (NP\_004765, 1391 a.a. ~ 1490 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

**Dilution**

WB~~1:500~1000

**Format**

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

**Storage**

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

**Precautions**

PPARBP Antibody (monoclonal) (M05) is for research use only and not for use in diagnostic or therapeutic procedures.

**PPARBP Antibody (monoclonal) (M05) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

### PPARBP Antibody (monoclonal) (M05) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (36.74 KDa) .

Detection limit for recombinant GST tagged PPARBP is approximately 0.3ng/ml as a capture antibody.

### PPARBP Antibody (monoclonal) (M05) - Background

The activation of gene transcription is a multistep process that is triggered by factors that recognize transcriptional enhancer sites in DNA. These factors work with co-activators to direct transcriptional initiation by the RNA polymerase II apparatus. The protein encoded by this gene is a subunit of the CRSP (cofactor required for SP1 activation) complex, which, along with TFIID, is required for efficient activation by SP1. This protein is also a component of other multisubunit complexes e.g. thyroid hormone receptor-(TR-) associated proteins which interact with TR and facilitate TR function on DNA templates in conjunction with initiation factors and cofactors. It also regulates p53-dependent apoptosis and it is essential for adipogenesis. This protein is known to have the ability to self-oligomerize.
