

PSPH Antibody (monoclonal) (M02)

Mouse monoclonal antibody raised against a full length recombinant PSPH. Catalog # AT3476a

Specification

PSPH Antibody (monoclonal) (M02) - Product Information

Application WB, E **Primary Accession** P78330 Other Accession BC063614 Reactivity Human Host mouse Clonality **Monoclonal** Isotype IgG1 kappa Calculated MW 25008

PSPH Antibody (monoclonal) (M02) - Additional Information

Gene ID 5723

Other Names

Phosphoserine phosphatase, PSP, PSPase, L-3-phosphoserine phosphatase, O-phosphoserine phosphohydrolase, PSPH

Target/Specificity

PSPH (AAH63614, 1 a.a. \sim 225 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution

WB~~1:500~1000

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2.

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

PSPH Antibody (monoclonal) (M02) is for research use only and not for use in diagnostic or therapeutic procedures.

PSPH Antibody (monoclonal) (M02) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot

- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

PSPH Antibody (monoclonal) (M02) - Images

Antibody Reactive Against Recombinant Protein. Western Blot detection against Immunogen (50.49 KDa) .

PSPH monoclonal antibody (M02), clone 2G9 Western Blot analysis of PSPH expression in K-562 ((Cat # AT3476a)

Western Blot analysis of PSPH expression in transfected 293T cell line by PSPH monoclonal antibody (M02), clone 2G9.

Lane 1: PSPH transfected lysate(25 KDa).

Lane 2: Non-transfected lysate.

Detection limit for recombinant GST tagged PSPH is approximately 0.1ng/ml as a capture antibody.

PSPH Antibody (monoclonal) (M02) - Background

The protein encoded by this gene belongs to a subfamily of the phosphotransferases. This encoded enzyme is responsible for the third and last step in L-serine formation. It catalyzes magnesium-dependent hydrolysis of L-phosphoserine and is also involved in an exchange reaction between L-serine and L-phosphoserine. Deficiency of this protein is thought to be linked to Williams syndrome.
