

## **PEMT Blocking Peptide (N-term)**

Synthetic peptide Catalog # BP1025a

### **Specification**

## PEMT Blocking Peptide (N-term) - Product Information

**Primary Accession** 

**Q9UBM1** 

# PEMT Blocking Peptide (N-term) - Additional Information

**Gene ID 10400** 

#### **Other Names**

Phosphatidylethanolamine N-methyltransferase, PEAMT, PEMT, PEMT2, PEMT, PEMPT, PNMT

### Target/Specificity

The synthetic peptide sequence is selected from aa 3-17 of HUMAN PEMT

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

## Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### PEMT Blocking Peptide (N-term) - Protein Information

Name PEMT {ECO:0000255|HAMAP-Rule:MF 03216}

Synonyms PEMPT, PNMT

#### **Function**

Catalyzes the three sequential steps of the methylation pathway for the biosynthesis of phosphatidylcholine, a critical and essential component for membrane structure (PubMed:<a href="http://www.uniprot.org/citations/12431977" target="\_blank">12431977</a>, PubMed:<a href="http://www.uniprot.org/citations/15927961" target="\_blank">15927961</a>). Uses S-adenosylmethionine (S-adenosyl-L-methionine, SAM or AdoMet) as the methyl group donor for the methylation of phosphatidylethanolamine (1,2-diacyl-sn-glycero-3-phosphoethanolamine, PE) to phosphatidylmonomethylethanolamine (1,2-diacyl-sn-glycero-3-phospho-N-methylethanolamine, PMME), PMME to phosphatidyldimethylethanolamine (1,2-diacyl-sn-glycero-3-phospho-N,N- dimethylethanolamine, PDME), and PDME to phosphatidylcholine (1,2- diacyl-sn-glycero-3-phosphocholine, PC), producing S-adenosyl-L-homocysteine in each step (PubMed:<a href="http://www.uniprot.org/citations/12431977" target="\_blank">12431977</a>, PubMed:<a href="http://www.uniprot.org/citations/15927961" target="\_blank">15927961</a>, Responsible for approximately 30% of hepatic PC with the

CDP-choline pathway accounting for the other 70% (Probable).

### **Cellular Location**

Endoplasmic reticulum. Note=localized in the endoplasmic reticulum (ER) of the liver and in a lipid metabolism-rich region of the ER known as mitochondria-associated membranes (PubMed:15927961) Adopts a topography within the ER membrane that positions both termini in the cytosol (PubMed:12431977). [Isoform 2]: Endoplasmic reticulum membrane; Multi-pass membrane protein {ECO:0000255|HAMAP-Rule:MF 03216}

### **Tissue Location**

Primarily expressed in liver (at protein level).

## PEMT Blocking Peptide (N-term) - Background

This gene encodes an enzyme which converts phosphatidylethanolamine to phosphatidylcholine by sequential methylation in the liver. The protein localizes to the endoplasmic reticulum and mitochondria-associated membranes. The gene is within the Smith-Magenis syndrome region on chromosome 17. Alternate splicing of this gene results in three transcript variants encoding two different isoforms.
