

# GCN5 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP1078d

# **Specification**

# GCN5 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession Q92830
Other Accession Q8N1A2

# GCN5 Antibody (N-term) Blocking Peptide - Additional Information

#### **Gene ID 2648**

#### **Other Names**

Histone acetyltransferase KAT2A, General control of amino acid synthesis protein 5-like 2, Histone acetyltransferase GCN5, HsGCN5, Lysine acetyltransferase 2A, STAF97, KAT2A, GCN5, GCN5L2, HGCN5

# **Target/Specificity**

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP1078d>AP1078d</a> was selected from the N-term region of human GCN5. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

## **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

# Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# GCN5 Antibody (N-term) Blocking Peptide - Protein Information

Name KAT2A {ECO:0000303|PubMed:27796307, ECO:0000312|HGNC:HGNC:4201}

### **Function**

Protein lysine acyltransferase that can act as a acetyltransferase, glutaryltransferase, succinyltransferase or malonyltransferase, depending on the context (PubMed:<a href="http://www.uniprot.org/citations/29211711" target="\_blank">29211711</a>, PubMed:<a href="http://www.uniprot.org/citations/35995428" target="\_blank">35995428</a>). Acts as a histone lysine succinyltransferase: catalyzes succinylation of histone H3 on 'Lys-79' (H3K79succ), with a maximum frequency around the transcription start sites of genes (PubMed:<a href="http://www.uniprot.org/citations/29211711" target="\_blank">29211711</a>). Succinylation of histones gives a specific tag for epigenetic transcription activation (PubMed:<a href="http://www.uniprot.org/citations/29211711" target="\_blank">29211711</a>). Association

with the 2-oxoglutarate dehydrogenase complex, which provides succinyl-CoA, is required for histone succinylation (PubMed:<a href="http://www.uniprot.org/citations/29211711" target=" blank">29211711</a>). In different complexes, functions either as an acetyltransferase (HAT) or as a succinyltransferase: in the SAGA and ATAC complexes, acts as a histone acetyltransferase (PubMed: <a href="http://www.uniprot.org/citations/17301242" target=" blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target=" blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/29211711" target="\_blank">29211711</a>). Has significant histone acetyltransferase activity with core histones, but not with nucleosome core particles (PubMed:<a  $href="http://www.uniprot.org/citations/17301242" \ target="\_blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target="\_blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target="_blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/1910375" target="_blank">19103755</a>, PubMed$ href="http://www.uniprot.org/citations/21131905" target="blank">21131905</a>). Has a a strong preference for acetylation of H3 at 'Lys-9' (H3K9ac) (PubMed: <a href="http://www.uniprot.org/citations/21131905" target=" blank">21131905</a>). Acetylation of histones gives a specific tag for epigenetic transcription activation (PubMed:<a href="http://www.uniprot.org/citations/17301242" target=" blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/19103755" target=" blank">19103755</a>, PubMed:<a href="http://www.uniprot.org/citations/29211711" target="\_blank">29211711</a>). Recruited by the XPC complex at promoters, where it specifically mediates acetylation of histone variant H2A.Z.1/H2A.Z, thereby promoting expression of target genes (PubMed: <a href="http://www.uniprot.org/citations/29973595" target=" blank">29973595</a>, PubMed:<a href="http://www.uniprot.org/citations/31527837" target="blank">31527837</a>). Involved in long-term memory consolidation and synaptic plasticity: acts by promoting expression of a hippocampal gene expression network linked to neuroactive receptor signaling (By similarity). Acts as a positive regulator of T-cell activation: upon TCR stimulation, recruited to the IL2 promoter following interaction with NFATC2 and catalyzes acetylation of histone H3 at 'Lys-9' (H3K9ac), leading to promote IL2 expression (By similarity). Required for growth and differentiation of craniofacial cartilage and bone by regulating acetylation of histone H3 at 'Lys-9' (H3K9ac) (By similarity). Regulates embryonic stem cell (ESC) pluripotency and differentiation (By similarity). href="http://www.uniprot.org/citations/17301242" target=" blank">17301242</a>, PubMed:<a href="http://www.uniprot.org/citations/16753578" target=" blank">16753578</a>, PubMed:<a href="http://www.uniprot.org/citations/27796307" target="blank">27796307</a>, PubMed:<a href="http://www.uniprot.org/citations/29174768" target="blank">29174768</a>). Involved in heart and limb development by mediating acetylation of TBX5, acetylation regulating nucleocytoplasmic shuttling of TBX5 (PubMed:<a href="http://www.uniprot.org/citations/29174768" target=" blank">29174768</a>). Acts as a negative regulator of centrosome amplification by mediating acetylation of PLK4 (PubMed: <a href="http://www.uniprot.org/citations/27796307" target="\_blank">27796307</a>). Acts as a negative regulator of gluconeogenesis by mediating acetylation and subsequent inactivation of PPARGC1A (PubMed:<a href="http://www.uniprot.org/citations/16753578" target=" blank">16753578</a>, PubMed:<a href="http://www.uniprot.org/citations/23142079" target="blank">23142079</a>). Also acts as a histone glutaryltransferase; catalyzes glutarylation of histone H4 on 'Lys-91' (H4K91glu), a mark that destabilizes nucleosomes by promoting dissociation of the H2A-H2B dimers from nucleosomes (PubMed: <a href="http://www.uniprot.org/citations/31542297" target=" blank">31542297</a>).

#### **Cellular Location**

Nucleus. Chromosome Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Note=Mainly localizes to the nucleus (PubMed:27796307). Localizes to sites of DNA damage (PubMed:25593309) Also localizes to centrosomes in late G1 and around the G1/S transition, coinciding with the onset of centriole formation (PubMed:27796307).

#### **Tissue Location**

Expressed in all tissues tested.

Tel: 858.875.1900 Fax: 858.875.1999

# GCN5 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# • Blocking Peptides

GCN5 Antibody (N-term) Blocking Peptide - Images

# GCN5 Antibody (N-term) Blocking Peptide - Background

GCN5 functions as a histone acetyltransferase (HAT) to promote transcriptional activation. Acetylation of histones gives a specific tag for epigenetic transcription activation. This protein has significant histone acetyltransferase activity with core histones, but not with nucleosome core particles.
