

VPS52 Antibody (C-term) Blocking peptide

Synthetic peptide Catalog # BP10925b

Specification

VPS52 Antibody (C-term) Blocking peptide - Product Information

Primary Accession

Q8N1B4

VPS52 Antibody (C-term) Blocking peptide - Additional Information

Gene ID 6293

Other Names

Vacuolar protein sorting-associated protein 52 homolog, SAC2 suppressor of actin mutations 2-like protein, VPS52, SACM2L

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

VPS52 Antibody (C-term) Blocking peptide - Protein Information

Name VPS52

Synonyms SACM2L

Function

Acts as a component of the GARP complex that is involved in retrograde transport from early and late endosomes to the trans-Golgi network (TGN). The GARP complex is required for the maintenance of the cycling of mannose 6-phosphate receptors between the TGN and endosomes, this cycling is necessary for proper lysosomal sorting of acid hydrolases such as CTSD (PubMed:15878329/a>, PubMed:18367545). Acts as a component of the EARP complex that is involved in endocytic recycling. The EARP complex associates with Rab4-positive endosomes and promotes recycling of internalized transferrin receptor (TFRC) to the plasma membrane (PubMed:25799061).

Cellular Location

Golgi apparatus, trans-Golgi network membrane; Peripheral membrane protein. Endosome membrane; Peripheral membrane protein. Recycling endosome. Note=Localizes to the trans-Golgi network as part of the GARP complex, while it localizes to recycling endosomes as part of the EARP

complex (PubMed:25799061)

VPS52 Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

VPS52 Antibody (C-term) Blocking peptide - Background

This gene encodes a protein that is similar to the yeastsuppressor of actin mutations 2 gene. The yeast protein forms asubunit of the tetrameric Golgi-associated retrograde proteincomplex that is involved in vesicle trafficking from from bothearly and late endosomes, back to the trans-Golgi network. Thisgene is located on chromosome 6 in a head-to-head orientation withthe gene encoding ribosomal protein S18.
