

CEBPD Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP10950a**Specification**

CEBPD Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [P49716](#)**CEBPD Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 1052**Other Names**

CCAAT/enhancer-binding protein delta, C/EBP delta, Nuclear factor NF-IL6-beta, NF-IL6-beta, CEBPD

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CEBPD Antibody (N-term) Blocking peptide - Protein Information**Name** CEBPD**Function**

Transcription activator that recognizes two different DNA motifs: the CCAAT homology common to many promoters and the enhanced core homology common to many enhancers (PubMed:16397300). Important transcription factor regulating the expression of genes involved in immune and inflammatory responses (PubMed:1741402, PubMed:16397300). Transcriptional activator that enhances IL6 transcription alone and as heterodimer with CEBPB (PubMed:1741402).

Cellular Location

Nucleus.

CEBPD Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CEBPD Antibody (N-term) Blocking peptide - Background

The protein encoded by this intronless gene is a bZIPtranscription factor which can bind as a homodimer to certain DNAregulatory regions. It can also form heterodimers with the relatedprotein CEBP-alpha. The encoded protein is important in theregulation of genes involved in immune and inflammatory responses,and may be involved in the regulation of genes associated withactivation and/or differentiation of macrophages. The cytogeneticlocation of this locus has been reported as both 8p11 and 8q11.
