

# HDAC3 Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP1103b

## Specification

## HDAC3 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>015379</u>

## HDAC3 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 8841

Other Names Histone deacetylase 3, HD3, RPD3-2, SMAP45, HDAC3

Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP1103b>AP1103b</a> was selected from the C-term region of human HDAC3. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage** Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions** This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## HDAC3 Antibody (C-term) Blocking Peptide - Protein Information

Name HDAC3

### Function

Histone deacetylase that catalyzes the deacetylation of lysine residues on the N-terminal part of the core histones (H2A, H2B, H3 and H4), and some other non-histone substrates (PubMed:<a href="http://www.uniprot.org/citations/23911289" target="\_blank">23911289</a>, PubMed:<a href="http://www.uniprot.org/citations/21030595" target="\_blank">21030595</a>, PubMed:<a href="http://www.uniprot.org/citations/21030595" target="\_blank">21444723</a>, PubMed:<a href="http://www.uniprot.org/citations/21444723" target="\_blank">21444723</a>, PubMed:<a href="http://www.uniprot.org/citations/25301942" target="\_blank">25301942</a>, PubMed:<a href="http://www.uniprot.org/citations/28497810" target="\_blank">28497810</a>, PubMed:<a href="http://www.uniprot.org/citations/28497810" target="\_blank">28407882/a>, PubMed:<a href="http://www.uniprot.org/citations/28497810" target="\_blank">28407882/a>, PubMed:<a href="http://www.uniprot.org/citations/28497810" target="\_blank">28407882/a>, PubMed:<a href="http://www.uniprot.org/citations/28497810" target="\_blank">28407882/a>, PubMed:<a href="http://www.uniprot.org/citations/28404892" target="\_blank">28407882/a>, PubMed:<a href="http://www.uniprot.org/citations/22404892" target="\_blank">28407882/a>, PubMed:<a href="http://www.uniprot.org/citations/23404892" target="\_blank">23014892</a>, PubMed:<a href="http://www.uniprot.org/citations/23404892" target="\_blank">23014892</a>, PubMed:<a href="http://www.uniprot.org/citations/23911289" target="\_blank">23014892</a>, PubMed:<a href="http://www.uniprot.org/citations/23911289" target="\_blank">23014892</a>, PubMe

deacetylases act via the formation of large multiprotein complexes (PubMed:<a href="http://www.uniprot.org/citations/23911289" target=" blank">23911289</a>). Participates in the BCL6 transcriptional repressor activity by deacetylating the H3 'Lys- 27' (H3K27) on enhancer elements, antagonizing EP300 acetyltransferase activity and repressing proximal gene expression (PubMed:<a href="http://www.uniprot.org/citations/23911289" target=" blank">23911289</a>). Acts as a molecular chaperone for shuttling phosphorylated NR2C1 to PML bodies for sumoylation (By similarity). Contributes, together with XBP1 isoform 1, to the activation of NFE2L2-mediated HMOX1 transcription factor gene expression in a PI(3)K/mTORC2/Akt-dependent signaling pathway leading to endothelial cell (EC) survival under disturbed flow/oxidative stress (PubMed:<a href="http://www.uniprot.org/citations/25190803" target=" blank">25190803</a>). Regulates both the transcriptional activation and repression phases of the circadian clock in a deacetylase activity-independent manner (By similarity). During the activation phase, promotes the accumulation of ubiguitinated BMAL1 at the E-boxes and during the repression phase, blocks FBXL3-mediated CRY1/2 ubiguitination and promotes the interaction of CRY1 and BMAL1 (By similarity). The NCOR1-HDAC3 complex regulates the circadian expression of the core clock gene BMAL1 and the genes involved in lipid metabolism in the liver (By similarity). Also functions as a deacetylase for non-histone targets, such as KAT5, MEF2D, MAPK14, RARA and STAT3 (PubMed:<a href="http://www.uniprot.org/citations/15653507" target=" blank">15653507</a>, PubMed:<a href="http://www.uniprot.org/citations/21030595" target=" blank">21030595</a>, PubMed:<a href="http://www.uniprot.org/citations/21444723" target=" blank">21444723</a>, PubMed:<a href="http://www.uniprot.org/citations/25301942" target=" blank">25301942</a>, PubMed:<a href="http://www.uniprot.org/citations/28167758" target=" blank">28167758</a>). Serves as a corepressor of RARA, mediating its deacetylation and repression, leading to inhibition of RARE DNA element binding (PubMed:<a href="http://www.uniprot.org/citations/28167758" target="\_blank">28167758</a>). In association with RARA, plays a role in the repression of microRNA-10a and thereby in the inflammatory response (PubMed: <a href="http://www.uniprot.org/citations/28167758" target=" blank">28167758</a>). In addition to protein deacetylase activity, also acts as a protein-lysine deacylase by recognizing other acyl groups: catalyzes removal of (2E)-butenoyl (crotonyl) and 2-hydroxyisobutanoyl (2-hydroxyisobutyryl) acyl groups from lysine residues, leading to protein decrotonylation and de-2- hydroxyisobutyrylation, respectively (PubMed: <a href="http://www.uniprot.org/citations/28497810" target="\_blank">28497810</a>, PubMed:<a href="http://www.uniprot.org/citations/29192674" target=" blank">29192674</a>, PubMed:<a href="http://www.uniprot.org/citations/34608293" target=" blank">34608293</a>). Catalyzes decrotonylation of MAPRE1/EB1 (PubMed:<a href="http://www.uniprot.org/citations/34608293" target=" blank">34608293</a>).

### **Cellular Location**

Nucleus. Cytoplasm. Cytoplasm, cytosol. Note=Colocalizes with XBP1 and AKT1 in the cytoplasm (PubMed:25190803). Predominantly expressed in the nucleus in the presence of CCAR2 (PubMed:21030595)

**Tissue Location** Widely expressed.

### HDAC3 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# HDAC3 Antibody (C-term) Blocking Peptide - Background

Histones play a critical role in transcriptional regulation, cell cycle progression, and developmental events. Histone acetylation/deacetylation alters chromosome structure and affects transcription

factor access to DNA. HDAC3 belongs to the histone deacetylase/acuc/apha family. It has histone deacetylase activity and represses transcription when tethered to a promoter. It may participate in the regulation of transcription through its binding with the zinc-finger transcription factor YY1. This protein can also down-regulate p53 function and thus modulate cell growth and apoptosis. HDAC3 isregarded as a potential tumor suppressor gene.
