

# MMP1 Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP11874c

### **Specification**

### MMP1 Antibody (Center) Blocking peptide - Product Information

Primary Accession

P03956

## MMP1 Antibody (Center) Blocking peptide - Additional Information

**Gene ID 4312** 

#### **Other Names**

Interstitial collagenase, Fibroblast collagenase, Matrix metalloproteinase-1, MMP-1, 22 kDa interstitial collagenase, 27 kDa interstitial collagenase, MMP1, CLG

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### MMP1 Antibody (Center) Blocking peptide - Protein Information

Name MMP1

**Synonyms CLG** 

#### **Function**

Cleaves collagens of types I, II, and III at one site in the helical domain. Also cleaves collagens of types VII and X (PubMed:<a href="http://www.uniprot.org/citations/2557822" target="\_blank">2557822</a>, PubMed:<a href="http://www.uniprot.org/citations/2153297" target="\_blank">2153297</a>, PubMed:<a href="http://www.uniprot.org/citations/1645757" target="\_blank">1645757</a>). In case of HIV infection, interacts and cleaves the secreted viral Tat protein, leading to a decrease in neuronal Tat's mediated neurotoxicity (PubMed:<a href="http://www.uniprot.org/citations/16807369" target=" blank">16807369</a>).

#### **Cellular Location**

Secreted, extracellular space, extracellular matrix

#### MMP1 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

### • Blocking Peptides

## MMP1 Antibody (Center) Blocking peptide - Images

## MMP1 Antibody (Center) Blocking peptide - Background

Proteins of the matrix metalloproteinase (MMP) family areinvolved in the breakdown of extracellular matrix in normalphysiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. This gene encodes a secreted enzymewhich breaks down the interstitial collagens, types I, II, and III. The gene is part of a cluster of MMP genes which localize tochromosome 11q22.3. Alternative splicing results in multipletranscript variants.
