

GCLC Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP11943a

Specification

GCLC Antibody (N-term) Blocking peptide - Product Information

Primary Accession

P48506

GCLC Antibody (N-term) Blocking peptide - Additional Information

Gene ID 2729

Other Names

Glutamate--cysteine ligase catalytic subunit, GCS heavy chain, Gamma-ECS, Gamma-glutamylcysteine synthetase, GCLC, GLCL, GLCLC

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

GCLC Antibody (N-term) Blocking peptide - Protein Information

Name GCLC (HGNC:4311)

Synonyms GLCL, GLCLC

Function

Catalyzes the ATP-dependent ligation of L-glutamate and L- cysteine and participates in the first and rate-limiting step in glutathione biosynthesis.

GCLC Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

Blocking Peptides

GCLC Antibody (N-term) Blocking peptide - Background

Glutamate-cysteine ligase, also known asgamma-glutamylcysteine synthetase is the first

Tel: 858.875.1900 Fax: 858.875.1999

rate-limiting enzymeof glutathione synthesis. The enzyme consists of two subunits, aheavy catalytic subunit and a light regulatory subunit. This locusencodes the catalytic subunit, while the regulatory subunit isderived from a different gene located on chromosome 1p22-p21. Mutations at this locus have been associated with hemolytic anemiadue to deficiency of gamma-glutamylcysteine synthetase and susceptibility to myocardial infarction.
