

PCDHAC2 Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP12157c

Specification

PCDHAC2 Antibody (Center) Blocking peptide - Product Information

Primary Accession

Q9Y5I4

PCDHAC2 Antibody (Center) Blocking peptide - Additional Information

Gene ID 56134

Other Names

Protocadherin alpha-C2, PCDH-alpha-C2, PCDHAC2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PCDHAC2 Antibody (Center) Blocking peptide - Protein Information

Name PCDHAC2

Function

Potential calcium-dependent cell-adhesion protein. May be involved in the establishment and maintenance of specific neuronal connections in the brain.

Cellular Location

Cell membrane; Single-pass type I membrane protein

PCDHAC2 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

PCDHAC2 Antibody (Center) Blocking peptide - Background

This gene is a member of the protocadherin alpha genecluster, one of three related gene clusters

Tel: 858.875.1900 Fax: 858.875.1999

tandemly linked onchromosome five that demonstrate an unusual genomic organization similar to that of B-cell and T-cell receptor gene clusters. Thealpha gene cluster is composed of 15 cadherin superfamily genesrelated to the mouse CNR genes and consists of 13 highly similarand 2 more distantly related coding sequences. The tandem array of 15 N-terminal exons, or variable exons, are followed by downstreamC-terminal exons, or constant exons, which are shared by all genesin the cluster. The large, uninterrupted N-terminal exons eachencode six cadherin ectodomains while the C-terminal exons encodethe cytoplasmic domain. These neural cadherin-like cell adhesionproteins are integral plasma membrane proteins that most likelyplay a critical role in the establishment and function of specificcell-cell connections in the brain. Alternative splicing has been observed and additional variants have been suggested but theirfull-length nature has yet to be determined.
