

PCDHB3 Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP12159a

Specification

PCDHB3 Antibody (N-term) Blocking peptide - Product Information

Primary Accession

09Y5E6

PCDHB3 Antibody (N-term) Blocking peptide - Additional Information

Gene ID 56132

Other Names

Protocadherin beta-3, PCDH-beta-3, PCDHB3

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PCDHB3 Antibody (N-term) Blocking peptide - Protein Information

Name PCDHB3

Function

Potential calcium-dependent cell-adhesion protein. May be involved in the establishment and maintenance of specific neuronal connections in the brain.

Cellular Location

Cell membrane; Single-pass type I membrane protein

PCDHB3 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

PCDHB3 Antibody (N-term) Blocking peptide - Background

This gene is a member of the protocadherin beta genecluster, one of three related gene clusters

Tel: 858.875.1900 Fax: 858.875.1999

tandemly linked onchromosome five. The gene clusters demonstrate an unusual genomicorganization similar to that of B-cell and T-cell receptor geneclusters. The beta cluster contains 16 genes and 3 pseudogenes, each encoding 6 extracellular cadherin domains and a cytoplasmictail that deviates from others in the cadherin superfamily. Theextracellular domains interact in a homophilic manner to specifydifferential cell-cell connections. Unlike the alpha and gammaclusters, the transcripts from these genes are made up of only onelarge exon, not sharing common 3' exons as expected. These neuralcadherin-like cell adhesion proteins are integral plasma membraneproteins. Their specific functions are unknown but they most likelyplay a critical role in the establishment and function of specificcell-cell neural connections.
