

TAF4B Antibody (C-term) Blocking peptide

Synthetic peptide Catalog # BP12163b

Specification

TAF4B Antibody (C-term) Blocking peptide - Product Information

Primary Accession

<u>092750</u>

TAF4B Antibody (C-term) Blocking peptide - Additional Information

Gene ID 6875

Other Names

Transcription initiation factor TFIID subunit 4B, Transcription initiation factor TFIID 105 kDa subunit, TAF(II)105, TAFII-105, TAFII105, TAF4B, TAF2C2, TAFII105

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TAF4B Antibody (C-term) Blocking peptide - Protein Information

Name TAF4B

Synonyms TAF2C2, TAFII105

Function

Cell type-specific subunit of the general transcription factor TFIID that may function as a gene-selective coactivator in certain cells. TFIID is a multimeric protein complex that plays a central role in mediating promoter responses to various activators and repressors. TAF4B is a transcriptional coactivator of the p65/RELA NF- kappa-B subunit. Involved in the activation of a subset of antiapoptotic genes including TNFAIP3. May be involved in regulating folliculogenesis. Through interaction with OCBA/POU2AF1, acts as a coactivator of B-cell-specific transcription. Plays a role in spermiogenesis and oogenesis.

Cellular Location

Nucleus. Cytoplasm. Note=Export into the cytoplasm is mediated by a CRM1-independent nuclear export pathway and not by phosphorylation.

Tissue Location

Preferentially expressed in ovarian granulosa cells (at protein level). Highly expressed in B-cells

TAF4B Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

TAF4B Antibody (C-term) Blocking peptide - Images

TAF4B Antibody (C-term) Blocking peptide - Background

TATA-binding protein associated factors (TAFs)participate, with TATA binding protein (TBP; MIM 600075), in theformation of the TFIID protein complex (see MIM 313650), which is involved in the initiation of gene transcription by RNA polymerasell (see MIM 180660).
