

STIM2 Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP12545a

Specification

STIM2 Antibody (N-term) Blocking peptide - Product Information

Primary Accession

Q9P246

STIM2 Antibody (N-term) Blocking peptide - Additional Information

Gene ID 57620

Other Names

Stromal interaction molecule 2, STIM2, KIAA1482

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

STIM2 Antibody (N-term) Blocking peptide - Protein Information

Name STIM2

Synonyms KIAA1482

Function

Plays a role in mediating store-operated Ca(2+) entry (SOCE), a Ca(2+) influx following depletion of intracellular Ca(2+) stores. Functions as a highly sensitive Ca(2+) sensor in the endoplasmic reticulum which activates both store-operated and store-independent Ca(2+)-influx. Regulates basal cytosolic and endoplasmic reticulum Ca(2+) concentrations. Upon mild variations of the endoplasmic reticulum Ca(2+) concentration, translocates from the endoplasmic reticulum to the plasma membrane where it probably activates the Ca(2+) release-activated Ca(2+) (CRAC) channels ORAI1, ORAI2 and ORAI3. May inhibit STIM1-mediated Ca(2+) influx.

Cellular Location

Endoplasmic reticulum membrane; Single-pass type I membrane protein. Note=Dynamically translocates from a uniform endoplasmic reticulum distribution to punctual endoplasmic reticulum-plasma membrane junctions in response to decrease in endoplasmic reticulum Ca(2+) concentration

Tissue Location

Expressed in all tissues and tumor cell lines examined.

STIM2 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

STIM2 Antibody (N-term) Blocking peptide - Background

This gene is a member of the stromal interaction molecule(STIM) family and likely arose, along with related family memberSTIM1, from a common ancestral gene. The encoded protein functions to regulate calcium concentrations in the cytosol and endoplasmicreticulum, and is involved in the activation of plasma membraneOrai Ca(2+) entry channels. This gene initiates translation from anon-AUG (UUG) start site. A signal peptide is cleaved from the resulting protein. Multiple transcript variants result fromalternative splicing.
