

#### **ASS1 Antibody (C-term) Blocking peptide** Synthetic peptide

Catalog # BP12606b

Specification

# ASS1 Antibody (C-term) Blocking peptide - Product Information

Primary Accession

<u>P00966</u>

## ASS1 Antibody (C-term) Blocking peptide - Additional Information

Gene ID 445

**Other Names** Argininosuccinate synthase, Citrulline--aspartate ligase, ASS1, ASS

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage** Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions** This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### ASS1 Antibody (C-term) Blocking peptide - Protein Information

Name ASS1 (HGNC:758)

Function

One of the enzymes of the urea cycle, the metabolic pathway transforming neurotoxic amonia produced by protein catabolism into inocuous urea in the liver of ureotelic animals. Catalyzes the formation of arginosuccinate from aspartate, citrulline and ATP and together with ASL it is responsible for the biosynthesis of arginine in most body tissues.

Cellular Location Cytoplasm, cytosol

**Tissue Location** Expressed in adult liver.

### ASS1 Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

### ASS1 Antibody (C-term) Blocking peptide - Background

The protein encoded by this gene catalyzes the penultimatestep of the arginine biosynthetic pathway. There are approximately10 to 14 copies of this gene including the pseudogenes scatteredacross the human genome, among which the one located on chromosome9 appears to be the only functional gene for argininosuccinatesynthetase. Mutations in the chromosome 9 copy of ASS causecitrullinemia. Two transcript variants encoding the same proteinhave been found for this gene.
