

VCX2 Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP12713a

Specification

VCX2 Antibody (N-term) Blocking peptide - Product Information

Primary Accession

Q9H322

VCX2 Antibody (N-term) Blocking peptide - Additional Information

Gene ID 51480

Other Names

Variable charge X-linked protein 2, Variable charge protein on X with two repeats, VCX-2r, Variably charged protein X-B, VCX-B, VCX2, VCX2R, VCXB

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

VCX2 Antibody (N-term) Blocking peptide - Protein Information

Name VCX2

Synonyms VCX2R, VCXB

Function

May mediate a process in spermatogenesis or may play a role in sex ratio distortion.

Tissue Location

Expressed exclusively in testis.

VCX2 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

This gene belongs to the VCX/Y gene family, which hasmultiple members on both X and Y chromosomes, and all are expressed exclusively in male germ cells. The X-linked members are clusteredon chromosome Xp22 and Y-linked members are two identical copies of the gene within a palindromic region on Yq11. The family membersshare a high degree of sequence identity, with the exception that a30-bp unit is tandemly repeated in X-linked members but occurs onlyonce in Y-linked members. The VCX gene cluster is polymorphic interms of copy number; different individuals may have a differentnumber of VCX genes. VCX/Y genes encode small and highly chargedproteins of unknown function. The presence of a putative bipartitenuclear localization signal suggests that VCX/Y members are nuclearproteins. This gene contains 2 repeats of the 30-bp unit. [providedby RefSeq].
