

# CHRNA1 Antibody (C-term) Blocking peptide

Synthetic peptide Catalog # BP13550b

# **Specification**

# CHRNA1 Antibody (C-term) Blocking peptide - Product Information

Primary Accession

# CHRNA1 Antibody (C-term) Blocking peptide - Additional Information

**Gene ID 1134** 

#### **Other Names**

Acetylcholine receptor subunit alpha, CHRNA1, ACHRA, CHNRA

### Target/Specificity

The synthetic peptide sequence used to generate the antibody AP13550b was selected from the C-term region of CHRNA1. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

P02708

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# CHRNA1 Antibody (C-term) Blocking peptide - Protein Information

Name CHRNA1 (HGNC:1955)

Synonyms ACHRA, CHNRA

# **Function**

[Isoform 1]: Upon acetylcholine binding, the AChR responds by an extensive change in conformation that affects all subunits and leads to opening of an ion-conducting channel across the plasma membrane.

# **Cellular Location**

Postsynaptic cell membrane; Multi-pass membrane protein. Cell membrane; Multi-pass membrane protein

## **Tissue Location**

Isoform 1 is only expressed in skeletal muscle. Isoform 2 is constitutively expressed in skeletal muscle, brain, heart, kidney, liver, lung and thymus

# CHRNA1 Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

### CHRNA1 Antibody (C-term) Blocking peptide - Background

The muscle acetylcholine receptor consiststs of 5 subunitsof 4 different types: 2 alpha isoforms and 1 each of beta, gamma, and delta subunits. 2 This gene encodes an alpha subunit that plays role in acetlycholine binding/channel gating. Alternativelyspliced transcript variants encoding different isoforms have been identified.
