

NSMAF Antibody (N-term) Blocking peptide
Synthetic peptide
Catalog # BP13585a**Specification**

NSMAF Antibody (N-term) Blocking peptide - Product InformationPrimary Accession [Q92636](#)**NSMAF Antibody (N-term) Blocking peptide - Additional Information****Gene ID** 8439**Other Names**

Protein FAN, Factor associated with neutral sphingomyelinase activation, Factor associated with N-SMase activation, NSMAF, FAN

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP13585a was selected from the N-term region of NSMAF. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

NSMAF Antibody (N-term) Blocking peptide - Protein Information**Name** NSMAF**Synonyms** FAN**Function**

Couples the p55 TNF-receptor (TNF-R55 / TNFR1) to neutral sphingomyelinase (N-SMASE). Specifically binds to the N-smase activation domain of TNF-R55. May regulate ceramide production by N- SMASE.

Tissue Location

Ubiquitous.

NSMAF Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

NSMAF Antibody (N-term) Blocking peptide - Background

This gene encodes a WD-repeat protein that binds the cytoplasmic sphingomyelinase activation domain of the 55kD tumor necrosis factor receptor. This protein is required for TNF-mediated activation of neutral sphingomyelinase and may play a role in regulating TNF-induced cellular responses such as inflammation. Alternative splicing results in multiple transcript variants.
