

## ADAM11 Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP14066a

### **Specification**

### ADAM11 Antibody (N-term) Blocking peptide - Product Information

**Primary Accession** 

075078

## ADAM11 Antibody (N-term) Blocking peptide - Additional Information

**Gene ID 4185** 

#### **Other Names**

Disintegrin and metalloproteinase domain-containing protein 11, ADAM 11, Metalloproteinase-like, disintegrin-like, and cysteine-rich protein, MDC, ADAM11, MDC

### Target/Specificity

The synthetic peptide sequence used to generate the antibody AP14066a was selected from the N-term region of ADAM11. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### ADAM11 Antibody (N-term) Blocking peptide - Protein Information

Name ADAM11

Synonyms MDC

#### **Function**

Probable ligand for integrin in the brain. This is a non catalytic metalloprotease-like protein. Required for localization of the potassium channel subunit proteins KCNA1/KV1.1 and KCNA2/KV1.2 at cerebellar cortex basket cell distal terminals, is thereby involved in ephaptic inhibitory synchronization of Purkinje cell firing and response to stress (By similarity). Plays a role in spatial learning and motor coordination (By similarity). Involved in the nociceptive pain response to chemical-derived stimulation (By similarity).

### **Cellular Location**

Presynaptic cell membrane {ECO:0000250|UniProtKB:Q9R1V4}; Single-pass type I membrane protein Perikaryon {ECO:0000250|UniProtKB:Q9R1V4}. Cell projection, axon

Tel: 858.875.1900 Fax: 858.875.1999

 $\{ECO:0000250|UniProtKB:Q9R1V4\}$ . Note=Localizes to basket cell terminals and pinceaux.  $\{ECO:0000250|UniProtKB:Q9R1V4\}$ 

#### **Tissue Location**

Expressed predominantly in brain. Slightly detected or not at all in other tissues

### ADAM11 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# ADAM11 Antibody (N-term) Blocking peptide - Background

This gene encodes a member of the ADAM (a disintegrin andmetalloprotease) protein family. Members of this family aremembrane-anchored proteins structurally related to snake venomdisintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. This gene represents a candidate tumor supressor gene for human breastcancer based on its location within a minimal region of chromosome 17q21 previously defined by tumor deletion mapping. [provided by RefSeq].
