

FUBP1 Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP14126c

Specification

FUBP1 Antibody (Center) Blocking peptide - Product Information

Primary Accession

Q96AE4

FUBP1 Antibody (Center) Blocking peptide - Additional Information

Gene ID 8880

Other Names

Far upstream element-binding protein 1, FBP, FUSE-binding protein 1, DNA helicase V, hDH V, FUBP1

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP14126c was selected from the Center region of FUBP1. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

FUBP1 Antibody (Center) Blocking peptide - Protein Information

Name FUBP1

Function

Regulates MYC expression by binding to a single-stranded far- upstream element (FUSE) upstream of the MYC promoter. May act both as activator and repressor of transcription.

Cellular Location

Nucleus.

FUBP1 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

FUBP1 Antibody (Center) Blocking peptide - Background

This gene encodes a ssDNA binding protein that activates the far upstream element (FUSE) of c-myc and stimulates expression of c-myc in undifferentiated cells. Regulation of FUSE by FUBPoccurs through single-strand binding of FUBP to the non-coding strand. This protein has been shown to function as an ATP-dependent DNA helicase.
