

# Mouse Map2k7 Antibody (Center) Blocking peptide

Synthetic peptide Catalog # BP14155c

### **Specification**

# Mouse Map2k7 Antibody (Center) Blocking peptide - Product Information

Primary Accession

**Q8CE90** 

# Mouse Map2k7 Antibody (Center) Blocking peptide - Additional Information

**Gene ID 26400** 

#### **Other Names**

Dual specificity mitogen-activated protein kinase kinase 7, MAP kinase kinase 7, MAPKK 7, JNK-activating kinase 2, MAPK/ERK kinase 7, MEK 7, c-Jun N-terminal kinase kinase 2, JNK kinase 2, JNKK 2, Map2k7 {ECO:0000312|MGI:MGI:1346871}

### Target/Specificity

The synthetic peptide sequence used to generate the antibody AP14155c was selected from the Center region of Mouse Map2k7. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### Mouse Map2k7 Antibody (Center) Blocking peptide - Protein Information

Name Map2k7 {ECO:0000312|MGI:MGI:1346871}

# **Function**

Dual specificity protein kinase which acts as an essential component of the MAP kinase signal transduction pathway. Essential component of the stress-activated protein kinase/c-Jun N-terminal kinase (SAP/JNK) signaling pathway. With MAP2K4/MKK4, is the one of the only known kinase to directly activate the stress-activated protein kinase/c-Jun N-terminal kinases MAPK8/JNK1, MAPK9/JNK2 and MAPK10/JNK3. MAP2K4/MKK4 and MAP2K7/MKK7 both activate the JNKs by phosphorylation, but they differ in their preference for the phosphorylation site in the Thr-Pro-Tyr motif. MAP2K4/MKK4 shows preference for phosphorylation of the Tyr residue and MAP2K7/MKK7 for the Thr residue. The monophosphorylation of JNKs on the Thr residue is sufficient to increase JNK activity indicating that MAP2K7/MKK7 is important to trigger JNK activity, while the additional phosphorylation of the Tyr residue by MAP2K4/MKK4 ensures optimal JNK activation. Has a specific role in JNK signal transduction pathway activated by pro-inflammatory cytokines. The MKK/JNK

signaling pathway is also involved in mitochondrial death signaling pathway, including the release cytochrome c, leading to apoptosis. Part of a non-canonical MAPK signaling pathway, composed of the upstream MAP3K12 kinase and downstream MAP kinases MAPK1/ERK2 and MAPK3/ERK1, that enhances the AP-1-mediated transcription of APP in response to APOE (PubMed:<a href="http://www.uniprot.org/citations/28111074" target="blank">28111074</a>).

**Cellular Location** Nucleus. Cytoplasm

### **Tissue Location**

Expressed at high levels in brain, lung, liver, skeletal muscle, kidney, and testis and at lower levels in the heart and spleen.

### Mouse Map2k7 Antibody (Center) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# Blocking Peptides

Mouse Map2k7 Antibody (Center) Blocking peptide - Images

### Mouse Map2k7 Antibody (Center) Blocking peptide - Background

Stress activated, dual specificity kinase that activates the JUN kinases MAPK8/JNK1, MAPK9/JNK2 and MAPK10/JNK3.
