

RNF40 Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP14362b

Specification

RNF40 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>075150</u>

RNF40 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 9810

Other Names E3 ubiquitin-protein ligase BRE1B, BRE1-B, 632-, 95 kDa retinoblastoma-associated protein, RBP95, RING finger protein 40, RNF40, BRE1B, KIAA0661

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

RNF40 Antibody (C-term) Blocking Peptide - Protein Information

Name RNF40

Synonyms BRE1B, KIAA0661

Function

Component of the RNF20/40 E3 ubiquitin-protein ligase complex that mediates monoubiquitination of 'Lys-120' of histone H2B (H2BK120ub1). H2BK120ub1 gives a specific tag for epigenetic transcriptional activation and is also prerequisite for histone H3 'Lys-4' and 'Lys-79' methylation (H3K4me and H3K79me, respectively). It thereby plays a central role in histone code and gene regulation. The RNF20/40 complex forms a H2B ubiquitin ligase complex in cooperation with the E2 enzyme UBE2A or UBE2B; reports about the cooperation with UBE2E1/UBCH are contradictory. Required for transcriptional activation of Hox genes.

Cellular Location Nucleus.

Tissue Location

Ubiquitously expressed. Expressed at higher level in testis, heart and pancreas, while it is only weakly expressed in lung, skeletal muscle and small intestine

RNF40 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

RNF40 Antibody (C-term) Blocking Peptide - Background

The protein encoded by this gene contains a RING finger, amotif known to be involved in protein-protein and protein-DNAinteractions. This protein was reported to interact with the tumorsuppressor protein RB1. Studies of the rat counterpart suggested that this protein may function as an E3 ubiquitin-protein ligase, and facilitate the ubiquitination and degradation of syntaxin 1, which is an essential component of the neurotransmitter releasemachinery.
