

TGIF1 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP14571a

Specification

TGIF1 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

Q15583

TGIF1 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 7050

Other Names

Homeobox protein TGIF1, 5'-TG-3'-interacting factor 1, TGIF1, TGIF

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TGIF1 Antibody (N-term) Blocking Peptide - Protein Information

Name TGIF1

Synonyms TGIF

Function

Binds to a retinoid X receptor (RXR) responsive element from the cellular retinol-binding protein II promoter (CRBPII-RXRE). Inhibits the 9-cis-retinoic acid-dependent RXR alpha transcription activation of the retinoic acid responsive element. Active transcriptional corepressor of SMAD2. Links the nodal signaling pathway to the bifurcation of the forebrain and the establishment of ventral midline structures. May participate in the transmission of nuclear signals during development and in the adult, as illustrated by the down-modulation of the RXR alpha activities.

Cellular Location

Nucleus.

TGIF1 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TGIF1 Antibody (N-term) Blocking Peptide - Background

The protein encoded by this gene is a member of thethree-amino acid loop extension (TALE) superclass of atypicalhomeodomains. TALE homeobox proteins are highly conservedtranscription regulators. This particular homeodomain binds to apreviously characterized retinoid X receptor responsive elementfrom the cellular retinol-binding protein II promoter. In additionto its role in inhibiting 9-cis-retinoic acid-dependent RXR alphatranscription activation of the retinoic acid responsive element, the protein is an active transcriptional co-repressor of SMAD2 andmay participate in the transmission of nuclear signals duringdevelopment and in the adult. Mutations in this gene are associated with holoprosence phaly type 4, which is a structural anomaly of the brain. Alternative splicing has been observed at this locus and eight variants, encoding four distinct isoforms, are described.
