This gene is a member of the paired box (PAX) family oftranscription factors. Members of this gene family typicallycontain a paired box domain, an octapeptide, and a paired-typehomeodomain. These genes play critical roles during fetaldevelopment and cancer growth. The specific function of the pairedbox 7 gene is unknown but speculated to involve tumor suppressionsince fusion of this gene with a forkhead domain family member hasbeen associated with alveolar rhabdomyosarcoma. Three transcriptvariants encoding different isoforms have been found for this gene.
