

TADA3L Antibody (C-term) Blocking Peptide Synthetic peptide

Catalog # BP14766b

Specification

TADA3L Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>075528</u>

TADA3L Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 10474

Other Names Transcriptional adapter 3, ADA3 homolog, hADA3, STAF54, Transcriptional adapter 3-like, ADA3-like protein, TADA3, ADA3, TADA3L

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TADA3L Antibody (C-term) Blocking Peptide - Protein Information

Name TADA3

Synonyms ADA3, TADA3L

Function

Functions as a component of the PCAF complex. The PCAF complex is capable of efficiently acetylating histones in a nucleosomal context. The PCAF complex could be considered as the human version of the yeast SAGA complex. Also known as a coactivator for p53/TP53- dependent transcriptional activation. Component of the ATAC complex, a complex with histone acetyltransferase activity on histones H3 and H4.

Cellular Location Nucleus

Tissue Location Ubiquitously expressed.

TADA3L Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TADA3L Antibody (C-term) Blocking Peptide - Background

Many DNA-binding transcriptional activator proteinsenhance the initiation rate of RNA polymerase II-mediated genetranscription by interacting functionally with the generaltranscription machinery bound at the basal promoter. Adaptorproteins are usually required for this activation, possibly toacetylate and destabilize nucleosomes, thereby relieving chromatinconstraints at the promoter. The protein encoded by this gene is atranscriptional activator adaptor and has been found to be part of the PCAF histone acetylase complex. In addition, it associates with the tumor suppressor protein p53 and is required for full activity of p53 and p53-mediated apoptosis. At least four alternativelyspliced variants have been found for this gene, but the full-lengthnature of some variants has not been determined. [provided byRefSeq].
