

RGS16 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP14770a**Specification**

RGS16 Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [O15492](#)**RGS16 Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 6004**Other Names**

Regulator of G-protein signaling 16, RGS16, A28-RGS14P, Retinal-specific RGS, RGS-r, hRGS-r, Retinally abundant regulator of G-protein signaling, RGS16, RGSR

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

RGS16 Antibody (N-term) Blocking Peptide - Protein Information**Name** RGS16**Synonyms** RGSR**Function**Regulates G protein-coupled receptor signaling cascades. Inhibits signal transduction by increasing the GTPase activity of G protein alpha subunits, thereby driving them into their inactive GDP-bound form (PubMed: <http://www.uniprot.org/citations/11602604> target="_blank">11602604, PubMed: <http://www.uniprot.org/citations/18434541> target="_blank">18434541). Plays an important role in the phototransduction cascade by regulating the lifetime and effective concentration of activated transducin alpha. May regulate extra and intracellular mitogenic signals (By similarity).**Cellular Location**

Membrane {ECO:0000250|UniProtKB:P97428}; Lipid- anchor {ECO:0000250|UniProtKB:P97428}

Tissue Location

Abundantly expressed in retina with lower levels of expression in most other tissues

RGS16 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

RGS16 Antibody (N-term) Blocking Peptide - Background

The protein encoded by this gene belongs to the 'regulator of G protein signaling' family. It inhibits signal transduction by increasing the GTPase activity of G protein alpha subunits. It also may play a role in regulating the kinetics of signaling in the phototransduction cascade.
