

**Actin (ACTB/ACTC) Antibody (Center) Blocking peptide**  
**Synthetic peptide**  
**Catalog # BP1491c****Specification**

---

**Actin (ACTB/ACTC) Antibody (Center) Blocking peptide - Product Information**Primary Accession [P68032](#)**Actin (ACTB/ACTC) Antibody (Center) Blocking peptide - Additional Information****Gene ID** 70**Other Names**

Actin, alpha cardiac muscle 1, Alpha-cardiac actin, ACTC1, ACTC

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP1491c](/product/products/AP1491c) was selected from the Center region of human ACTB/ACTC. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**Actin (ACTB/ACTC) Antibody (Center) Blocking peptide - Protein Information****Name** ACTC1**Synonyms** ACTC**Function**

Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells.

**Cellular Location**

Cytoplasm, cytoskeleton.

**Actin (ACTB/ACTC) Antibody (Center) Blocking peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

#### **Actin (ACTB/ACTC) Antibody (Center) Blocking peptide - Background**

Actins are highly conserved proteins that are involved in cell motility, structure, and integrity. ACTB/ACTC are nonmuscle cytoskeletal actins and major constituents of the contractile apparatus. Defects in ACTB are a cause of juvenile-onset dystonia. Defects in ACTC have been associated with idiopathic dilated cardiomyopathy (IDC) and familial hypertrophic cardiomyopathy (FHC).
