

## SAP18 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP14996c

## **Specification**

## SAP18 Antibody (Center) Blocking Peptide - Product Information

**Primary Accession** 

000422

# SAP18 Antibody (Center) Blocking Peptide - Additional Information

**Gene ID** 10284

#### **Other Names**

Histone deacetylase complex subunit SAP18, 18 kDa Sin3-associated polypeptide, 2HOR0202, Cell growth-inhibiting gene 38 protein, Sin3-associated polypeptide p18, SAP18

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

## **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## SAP18 Antibody (Center) Blocking Peptide - Protein Information

## Name SAP18

## **Function**

Component of the SIN3-repressing complex. Enhances the ability of SIN3-HDAC1-mediated transcriptional repression. When tethered to the promoter, it can direct the formation of a repressive complex to core histone proteins. Auxiliary component of the splicing- dependent multiprotein exon junction complex (EJC) deposited at splice junction on mRNAs. The EJC is a dynamic structure consisting of core proteins and several peripheral nuclear and cytoplasmic associated factors that join the complex only transiently either during EJC assembly or during subsequent mRNA metabolism. Component of the ASAP and PSAP complexes which bind RNA in a sequence-independent manner and are proposed to be recruited to the EJC prior to or during the splicing process and to regulate specific excision of introns in specific transcription subsets. The ASAP complex can inhibit mRNA processing during in vitro splicing reactions. The ASAP complex promotes apoptosis and is disassembled after induction of apoptosis. Involved in the splicing modulation of BCL2L1/Bcl-X (and probably other apoptotic genes); specifically inhibits the formation of proapoptotic isoforms such as Bcl-X(S); the activity is different from the established EJC assembly and function.

#### **Cellular Location**

Nucleus. Cytoplasm. Nucleus speckle. Note=Shuttles between the nucleus and the cytoplasm

(PubMed:16314458). Colocalizes with ACIN1 and SRSF2 in nuclear speckles (PubMed:20966198).

**Tissue Location** Ubiquitous.

## SAP18 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## SAP18 Antibody (Center) Blocking Peptide - Background

Histone acetylation plays a key role in the regulation ofeukaryotic gene expression. Histone acetylation and deacetylationare catalyzed by multisubunit complexes. The protein encoded bythis gene is a component of the histone deacetylase complex, whichincludes SIN3, SAP30, HDAC1, HDAC2, RbAp46, RbAp48, and otherpolypeptides. This protein directly interacts with SIN3 andenhances SIN3-mediated transcriptional repression when tethered tothe promoter. A pseudogene has been identified on chromosome 2.
