

Calmodulin Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP1570b

Specification

Calmodulin Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

Q9BRL5

Calmodulin Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 808

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP1570b was selected from the C-term region of human Calmodulin . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Calmodulin Antibody (C-term) Blocking Peptide - Protein Information

Name Q9BRL5

Calmodulin Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

Calmodulin Antibody (C-term) Blocking Peptide - Background

Calmodulin is the archetype of the family of calcium-modulated proteins of which nearly 20 members have been found. They are identified by their occurrence in the cytosol or on membranes facing the cytosol and by a high affinity for calcium. Calmodulin contains 149 amino acids and has 4 calcium-binding domains. Its functions include roles in growth and the cell cycle as well as in signal transduction and the synthesis and release of neurotransmitters.
