

**HMGCL Antibody (Center) Blocking Peptide**  
**Synthetic peptide**  
**Catalog # BP16221c****Specification**

---

**HMGCL Antibody (Center) Blocking Peptide - Product Information**Primary Accession [P35914](#)**HMGCL Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 3155**Other Names**Hydroxymethylglutaryl-CoA lyase, mitochondrial, HL, HMG-CoA lyase,  
3-hydroxy-3-methylglutarate-CoA lyase, HMGCL**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**HMGCL Antibody (Center) Blocking Peptide - Protein Information****Name** HMGCL**Function**

Mitochondrial 3-hydroxymethyl-3-methylglutaryl-CoA lyase that catalyzes a cation-dependent cleavage of (S)-3-hydroxy-3-methylglutaryl-CoA into acetyl-CoA and acetoacetate, a key step in ketogenesis. Terminal step in leucine catabolism. Ketone bodies (beta-hydroxybutyrate, acetoacetate and acetone) are essential as an alternative source of energy to glucose, as lipid precursors and as regulators of metabolism.

**Cellular Location**

Mitochondrion matrix {ECO:0000250|UniProtKB:P38060}. Peroxisome {ECO:0000250|UniProtKB:P38060}. Note=Unprocessed form is peroxisomal {ECO:0000250|UniProtKB:P38060}

**Tissue Location**

Highest expression in liver. Expressed in pancreas, kidney, intestine, testis, fibroblasts and lymphoblasts. Very low expression in brain and skeletal muscle. The relative expression of isoform 2 (at mRNA level) is highest in heart (30%), skeletal muscle (22%), and brain (14%).

## **HMGCL Antibody (Center) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

## **HMGCL Antibody (Center) Blocking Peptide - Background**

HMGCL belongs to the HMG-CoA lyase family. It is a mitochondrial enzyme that catalyzes the final step of leucine degradation and plays a key role in ketone body formation. Mutations in this gene are associated with HMG-CoA lyase deficiency. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq].
