

MCM7 Antibody (N-term) Blocking Peptide Synthetic peptide

Catalog # BP16322a

Specification

MCM7 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

<u>P33993</u>

MCM7 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 4176

Other Names

DNA replication licensing factor MCM7, CDC47 homolog, P11-MCM3, MCM7, CDC47, MCM2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MCM7 Antibody (N-term) Blocking Peptide - Protein Information

Name MCM7 (<u>HGNC:6950</u>)

Synonyms CDC47, MCM2

Function

Acts as a component of the MCM2-7 complex (MCM complex) which is the replicative helicase essential for 'once per cell cycle' DNA replication initiation and elongation in eukaryotic cells. Core component of CDC45-MCM-GINS (CMG) helicase, the molecular machine that unwinds template DNA during replication, and around which the replisome is built (PubMed:32453425, PubMed:34694004, PubMed:34694004, PubMed:34700328, PubMed:35585232, PubMed:35585232, PubMed:9305914). The active ATPase sites in the MCM2-7 ring are formed through the interaction surfaces of two neighboring subunits such that a critical structure of a conserved arginine finger motif is provided in trans relative to the ATP-binding site of the Walker A box of the adjacent subunit. The six ATPase active sites, however, are likely to contribute differentially to the complex helicase activity (PubMed:32453425). Required for S-phase checkpoint activation upon UV-induced damage.

Cellular Location

Nucleus. Chromosome. Note=Associated with chromatin before the formation of nuclei and detaches from it as DNA replication progresses.

MCM7 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MCM7 Antibody (N-term) Blocking Peptide - Background

The protein encoded by this gene is one of the highlyconserved mini-chromosome maintenance proteins (MCM) that areessential for the initiation of eukaryotic genome replication. Thehexameric protein complex formed by the MCM proteins is a keycomponent of the pre-replication complex (pre_RC) and may beinvolved in the formation of replication forks and in therecruitment of other DNA replication related proteins. The MCMcomplex consisting of this protein and MCM2, 4 and 6 proteinspossesses DNA helicase activity, and may act as a DNA unwindingenzyme. Cyclin D1-dependent kinase, CDK4, is found to associatewith this protein, and may regulate the binding of this proteinwith the tumorsuppressor protein RB1/RB. Alternatively splicedtranscript variants encoding distinct isoforms have been reported.
