

SULT2A1 Antibody (N-term) Blocking Peptide Synthetic peptide Catalog # BP16646a

Specification

SULT2A1 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

<u>Q06520</u>

SULT2A1 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 6822

Other Names

Bile salt sulfotransferase, Dehydroepiandrosterone sulfotransferase, DHEA-ST, Hydroxysteroid Sulfotransferase, HST, ST2, ST2A3, Sulfotransferase 2A1, ST2A1, SULT2A1, HST, STD

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SULT2A1 Antibody (N-term) Blocking Peptide - Protein Information

Name SULT2A1

Synonyms HST, STD

Function

Sulfotransferase that utilizes 3'-phospho-5'-adenylyl sulfate (PAPS) as sulfonate donor to catalyze the sulfonation of steroids and bile acids in the liver and adrenal glands. Mediates the sulfation of a wide range of steroids and sterols, including pregnenolone, androsterone, DHEA, bile acids, cholesterol and as well many xenobiotics that contain alcohol and phenol functional groups (PubMed:7678732, PubMed:2268288, PubMed:2268288, PubMed:18042734, PubMed:18042734, PubMed:18042734, PubMed:21187059, PubMed:21187059, PubMed:20671343, PubMed:7854148). Sulfonation increases the water solubility of most compounds, and therefore their renal excretion, but it can also result in bioactivation to form active metabolites. Plays an important role in maintening steroid and lipid homeostasis (PubMed:<a

href="http://www.uniprot.org/citations/21187059" target="_blank">21187059, PubMed:19589875, PubMed:14573603). Plays a key role in bile acid metabolism (PubMed:2268288). In addition, catalyzes the metabolic activation of potent carcinogenic polycyclic arylmethanols (By similarity).

Cellular Location Cytoplasm.

Tissue Location

Liver, adrenal and at lower level in the kidney. Is present in human fetus in higher level in the adrenal than the liver and the kidney

SULT2A1 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SULT2A1 Antibody (N-term) Blocking Peptide - Background

This gene encodes a member of the sulfotransferase family.Sulfotransferases aid in the metabolism of drugs and endogenouscompounds by converting these substances into more hydrophilicwater-soluble sulfate conjugates that can be easily excreted. Thisprotein catalyzes the sulfation of steroids and bile acids in theliver and adrenal glands, and may have a role in the inheritedadrenal androgen excess in women with polycystic ovary syndrome.
