

CDCA4 Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP16652b

Specification

CDCA4 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

Q9BXL8

CDCA4 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 55038

Other Names

Cell division cycle-associated protein 4, Hematopoietic progenitor protein, CDCA4, HEPP

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CDCA4 Antibody (C-term) Blocking Peptide - Protein Information

Name CDCA4

Synonyms HEPP

Function

May participate in the regulation of cell proliferation through the E2F/RB pathway. May be involved in molecular regulation of hematopoietic stem cells and progenitor cell lineage commitment and differentiation (By similarity).

Cellular Location

Nucleus.

Tissue Location

Highest levels of expression in the pancreas, thymus, testis, spleen, liver, placenta and leukocytes. Relatively low levels in the lung, kidney, prostate, ovary, small intestine and colon Hardly detectable, if at all, in the brain, skeletal muscle and heart

CDCA4 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CDCA4 Antibody (C-term) Blocking Peptide - Background

This gene encodes a protein that belongs to the E2F familyof transcription factors. This protein regulates E2F-dependenttranscriptional activation and cell proliferation, mainly throughthe E2F/retinoblastoma protein pathway. It also functions in theregulaton of JUN oncogene expression. This protein showsdistinctive nuclear-mitotic apparatus distribution, it is involved in spindle organization from prometaphase, and may also play a roleas a midzone factor involved in chromosome segregation orcytokinesis. Two alternatively spliced transcript variants encodingthe same protein have been noted for this gene. Two pseudogeneshave also been identified on chromosome 1.
