

### AP3B2 Antibody (N-term) Blocking Peptide Synthetic peptide

Catalog # BP16877a

## Specification

# AP3B2 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

<u>Q13367</u>

# AP3B2 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 8120

**Other Names** 

AP-3 complex subunit beta-2, Adaptor protein complex AP-3 subunit beta-2, Adaptor-related protein complex 3 subunit beta-2, Beta-3B-adaptin, Clathrin assembly protein complex 3 beta-2 large chain, Neuron-specific vesicle coat protein beta-NAP, AP3B2

#### Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions** 

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# AP3B2 Antibody (N-term) Blocking Peptide - Protein Information

## Name AP3B2

#### Function

Subunit of non-clathrin- and clathrin-associated adaptor protein complex 3 (AP-3) that plays a role in protein sorting in the late-Golgi/trans-Golgi network (TGN) and/or endosomes. The AP complexes mediate both the recruitment of clathrin to membranes and the recognition of sorting signals within the cytosolic tails of transmembrane cargo molecules. AP-3 appears to be involved in the sorting of a subset of transmembrane proteins targeted to lysosomes and lysosome-related organelles. In concert with the BLOC-1 complex, AP-3 is required to target cargos into vesicles assembled at cell bodies for delivery into neurites and nerve terminals.

#### **Cellular Location**

Cytoplasmic vesicle, clathrin-coated vesicle membrane; Peripheral membrane protein; Cytoplasmic side. Golgi apparatus Note=Component of the coat surrounding the cytoplasmic face of coated vesicles located at the Golgi complex.

#### **Tissue Location**

Isoform 1 expression is specific to nervous system. Expressed in nerve terminal and cell body, and is associated with nerve-terminal vesicles. Expression seen in Purkinje cells, cortical neurons,

neuroectodermal tumors and graded in cerebral cortex (deeper layers exhibit stronger expression) (PubMed:1851215). Isoform 2 is expressed at high levels in brain and testis (PubMed:17453999)

## **AP3B2 Antibody (N-term) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

## AP3B2 Antibody (N-term) Blocking Peptide - Background

Adaptor protein-3 (AP3) is a heterotetrameric vesicle-coatprotein complex. Some AP3 subunits are ubiquitously expressed, whereas others are expressed exclusively in neurons. Theneuron-specific AP3 complex, which includes AP3B2, is thought toserve neuron-specific functions such as neurotransmitter release(Grabner et al., 2006 [PubMed 16788073]).
