

MS4A7 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP16946c

Specification

MS4A7 Antibody (Center) Blocking Peptide - Product Information

Primary Accession

<u>Q9GZW8</u>

MS4A7 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 58475

Other Names Membrane-spanning 4-domains subfamily A member 7, CD20 antigen-like 4, CD20/FC-epsilon-RI-beta family member 4, Four-span transmembrane protein 2, MS4A7, 4SPAN2, CD20L4, CFFM4

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MS4A7 Antibody (Center) Blocking Peptide - Protein Information

Name MS4A7

Synonyms 4SPAN2, CD20L4, CFFM4

Function May be involved in signal transduction as a component of a multimeric receptor complex.

Cellular Location Membrane; Multi-pass membrane protein.

Tissue Location

Ubiquitous expression in normal tissues. Expression is more elevated in adult liver, lung, spleen, and heart than in their fetal counterparts, and is higher in normal tissues than in the cancerous tissue or cell lines. Low levels of expression were detected in the promonocytic stage, whereas high levels of expression were detected in mature monocytes

MS4A7 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MS4A7 Antibody (Center) Blocking Peptide - Background

This gene encodes a member of the membrane-spanning 4Agene family, members of which are characterized by commonstructural features and similar intron/exon splice boundaries anddisplay unique expression patterns in hematopoietic cells and nonlymphoid tissues. This family member is associated with maturecellular function in the monocytic lineage, and it may be acomponent of a receptor complex involved in signal transduction. This gene is localized to 11q12, in a cluster of other familymembers. At least four alternatively spliced transcript variantsencoding two distinct isoforms have been observed. [provided byRefSeq].
