

WNT9B Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP16959c

Specification

WNT9B Antibody (Center) Blocking Peptide - Product Information

Primary Accession

014905

WNT9B Antibody (Center) Blocking Peptide - Additional Information

Gene ID 7484

Other Names

Protein Wnt-9b, Protein Wnt-14b, Protein Wnt-15, WNT9B, WNT14B, WNT15

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

WNT9B Antibody (Center) Blocking Peptide - Protein Information

Name WNT9B

Synonyms WNT14B {ECO:0000303|PubMed:11604992}, WN

Function

Ligand for members of the frizzled family of seven transmembrane receptors (Probable). Functions in the canonical Wnt/beta-catenin signaling pathway. Required for normal embryonic kidney development, and for normal development of the urogenital tract, including uterus and part of the oviduct and the upper vagina in females, and epididymis and vas deferens in males. Activates a signaling cascade in the metanephric mesenchyme that induces tubulogenesis. Acts upstream of WNT4 in the signaling pathways that mediate development of kidney tubules and the Muellerian ducts. Plays a role in cranofacial development and is required for normal fusion of the palate during embryonic development (By similarity).

Cellular Location

Secreted, extracellular space, extracellular matrix. Secreted

Tissue Location

Moderately expressed in fetal kidney and adult kidney. Also found in brain

Tel: 858.875.1900 Fax: 858.875.1999

WNT9B Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

WNT9B Antibody (Center) Blocking Peptide - Background

The WNT gene family consists of structurally related genesthat encode secreted signaling proteins. These proteins have beenimplicated in oncogenesis and in several developmental processes, including regulation of cell fate and patterning duringembryogenesis. This gene is a member of the WNT gene family. Studyof its expression in the teratocarcinoma cell line NT2 suggests that it may be implicated in the early process of neuronal differentiation of NT2 cells induced by retinoic acid. This gene isclustered with WNT3, another family member, in the chromosome 17q21region.
