

MSR1 Antibody (C-term) Blocking Peptide Synthetic peptide

Catalog # BP17001b

Specification

MSR1 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>P21757</u>

MSR1 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 4481

Other Names

Macrophage scavenger receptor types I and II, Macrophage acetylated LDL receptor I and II, Scavenger receptor class A member 1, CD204, MSR1, SCARA1

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MSR1 Antibody (C-term) Blocking Peptide - Protein Information

Name MSR1

Synonyms SCARA1

Function

Membrane glycoproteins implicated in the pathologic deposition of cholesterol in arterial walls during atherogenesis. Two types of receptor subunits exist. These receptors mediate the endocytosis of a diverse group of macromolecules, including modified low density lipoproteins (LDL) (PubMed:2251254). Isoform III does not internalize acetylated LDL (PubMed:9548586).

Cellular Location

Membrane; Single-pass type II membrane protein.

Tissue Location

Isoform I, isoform II and isoform III are expressed in monocyte-derived macrophages. Isoform I and isoform II are expressed in the liver, placenta and brain.

MSR1 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MSR1 Antibody (C-term) Blocking Peptide - Background

This gene encodes the class A macrophage scavengerreceptors, which include three different types (1, 2, 3) generatedby alternative splicing of this gene. These receptors or isoformsare macrophage-specific trimeric integral membrane glycoproteinsand have been implicated in many macrophage-associatedphysiological and pathological processes including atherosclerosis, Alzheimer's disease, and host defense. The isoforms type 1 and type2 are functional receptors and are able to mediate the endocytosisof modified low density lipoproteins (LDLs). The isoform type 3does not internalize modified LDL (acetyl-LDL) despite having thedomain shown to mediate this function in the types 1 and 2isoforms. It has an altered intracellular processing and is trapped within the endoplasmic reticulum, making it unable to performendocytosis. The isoform type 3 can inhibit the function of soforms type 1 and type 2 when co-expressed, indicating a dominantnegative effect and suggesting a mechanism for regulation of scavenger receptor activity in macrophages.
