

NUDT4 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP17167a

Specification

NUDT4 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

Q9NZI9

NUDT4 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 11163

Other Names

Diphosphoinositol polyphosphate phosphohydrolase 2, DIPP-2, Diadenosine 5', 5'''-P1, P6-hexaphosphate hydrolase 2, 361-, Nucleoside diphosphate-linked moiety X motif 4, Nudix motif 4, NUDT4, DIPP2, KIAA0487

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

NUDT4 Antibody (N-term) Blocking Peptide - Protein Information

Name NUDT4 (HGNC:8051)

Synonyms DIPP2, KIAA0487

Function

Cleaves a beta-phosphate from the diphosphate groups in PP- InsP5 (diphosphoinositol pentakisphosphate), PP-InsP4 and [PP]2-InsP4 (bisdiphosphoinositol tetrakisphosphate), suggesting that it may play a role in signal transduction (PubMed:10777568, PubMed:12370170). Can also catalyze the hydrolysis of diadenosine 5',5'''-P1,P6-hexaphosphate (Ap6A) but not diadenosine 5',5'''-P1,P5-pentaphosphate (Ap5A) and the major reaction products are ADP and p4a from Ap6A (PubMed:12370170). Also able to hydrolyze 5-phosphoribose 1-diphosphate (PubMed:12370170). Does not play a role in U8 snoRNA decapping activity (By similarity). Binds U8 snoRNA (By similarity).

Cellular Location

Cytoplasm.

Tissue Location

Expressed in heart and, at lower level in skeletal muscle, pancreas and kidney.

NUDT4 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

NUDT4 Antibody (N-term) Blocking Peptide - Background

The protein encoded by this gene regulates the turnover ofdiphosphoinositol polyphosphates. The turnover of these high-energydiphosphoinositol polyphosphates represents a molecular switchingactivity with important regulatory consequences. Molecularswitching by diphosphoinositol polyphosphates may contribute toregulating intracellular trafficking. Several alternatively splicedtranscript variants have been described, but the full-length natureof some variants has not been determined. Isoforms DIPP2alpha andDIPP2beta are distinguishable from each other solely by DIPP2betapossessing one additional amino acid due to intron boundaryskidding in alternate splicing.
